Data in many forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to obtain more information

Inquiries about this publication and related statistics or services should be directed to: Census Operations Division, Statistics Canada, Ottawa, Ontario, K1A 0T6 (telephone: (613) 951-4225) or to the Statistics Canada Regional Reference Centre in:

Halifax	(902) 426-5331	Regina	(306) 780-5405
Montréal	(514) 283-5725	Edmonton	(403) 495-3027
Ottawa	(613) 951-8116	Calgary	(403) 292-6717
Toronto	(416) 973-6586	Vancouver	(604) 666-3691
Winnipeg	(204) 983-4020		

You can also visit our World Wide Web site: <http://www.statcan.ca>

Toll-free access is provided for all users who reside outside the local dialling area of any of the Regional Reference Centres.

Ordering information

All prices exclude sales tax

The 1996 Census Catalogue – First Edition, Catalogue No. 92-350-XPE, sells for \$15.00 per copy in Canada. Outside Canada, the cost is US \$15.00 per copy.

Please send orders to Statistics Canada, Operations and Integration Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6 or by dialling (613) 951-7277 or 1 800 700-1033, by fax (613) 951-1584 or 1 800 889-9734 or by Internet: order@statcan.ca. Statistics Canada publications may also be purchased from authorized agents, bookstores and local Statistics Canada offices.

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Note of Appreciation

Canada owes the success of its statistical system to a long-standing cooperation involving Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Introduction

On May 14, 1996, Canada's population helped paint a new statistical portrait of the country and its inhabitants. Using Canadians' answers to census questions, Statistics Canada has put together a wide assortment of products and services and made them available to the many users of census data, including analysts, researchers and government decision makers.

To help users decide which of the many 1996 Census products and services is right for them, Statistics Canada has two research tools: one in printed form, the 1996 Census Catalogue, and the other in electronic form, Information on Products and Services (IPS).

For People Who Like to Surf the Internet

For those who prefer the Internet, the information in this catalogue can also be found in IPS (Information on Products and Services), under "Products and services" on Statistics Canada's Web site. IPS is a database that can be searched for information about any of Statistics Canada's publications, products and services. With IPS, users can run effective, efficient search queries to find publications, electronic products, microdata files or services related to their areas of interest.

Statistics Canada's Web site is located at
<http://www.statcan.ca>.

The 1996 Census Catalogue

First Edition

In the fall of 1996, Statistics Canada published the *1996 Census Preview of Products and Services*, which provided a general description of the range of forthcoming products and services. The *1996 Census Catalogue - First Edition* presents the full line of products and services in detail.

Second Edition

Users are reminded that the content of some census products may yet change, primarily because of the data compilation process, which is still in progress as this publication goes to press. A second edition of the *1996 Census Catalogue*, scheduled for release in the fall of 1998, will contain definitive information about 1996 Census products and services.

Until the second edition is published, users can obtain the latest information by consulting IPS, which is updated periodically, or by contacting the Statistics Canada regional reference centre in their area (see the list in the chapter entitled "How to Get Help").

How to Use the Catalogue

The catalogue has two main parts: 1996 Census of Population products and services and 1996 Census of Agriculture products and services.

Census of Population products and services are divided into five categories: (1) reference products, (2) digital geography products, (3) standard data products, (4) analytical products and (5) tabulation services. Standard data products are further divided into six different series of products. An overview of the full range of 1996 Census of Population products and services is provided at the beginning of the Census of Population chapter.

There are three categories of Census of Agriculture products: (1) data products, (2) an analytical publication and (3) Census of Agriculture services. An overview is provided at the beginning of that chapter.

The catalogue covers each of the above categories of products and services in turn. There is an overview for each category, with general information about the various products, their prices and dissemination media.

Following the overview is a detailed list of the products or services by catalogue number, with a description and the publication date and media. The only exception is the section on standard data products. In this case, there is an overview for each of the six series in the category, and the list of products in five of the series is given in tabular form together with related information. The dissemination media of the standard data products are indicated in the legend below:

D: diskette
 CD: CD-ROM
 P: print

In contrast to previous censuses, each 1996 Census product or service is considered an individual product, even though it is part of a category or a series. Hence, each product or service has a unique catalogue number (product number).

To assist users in their research, a detailed table of contents is provided at the front of the catalogue. Users who need help or want to know how to obtain census products and services can find useful information in the section entitled "How to Get Help". The catalogue's appendices also provide further information about the components of area profiles (electronic version) and data quality, as well as complete information on geography products and services.

Major Data Releases

The initial release of 1996 Census results took place in April 1997, seven months after the end of field operations. During those months, over 12.4 million questionnaires went through processing, data entry, automated coding and compilation before the resulting data could be analysed and made available to users. Each step had to be completed and certified before the data were released. This process ensures that census data meet the high standards users have come to expect.

The release of census variables is announced in Statistics Canada's official release vehicle, *The Daily*. On release day, highlights and an analysis of the key trends in the data are presented in *The Daily*. The same information is also made available to users on Statistics Canada's Web site (<http://www.statcan.ca>), along with a few excerpts from tables in *The Nation* series.

A wide assortment of data is also available through Statistics Canada's regional reference centres on release day. These data are released in two forms. The *Nation* series (see Section 3.2) provides a full range of statistics, with data for Canada, provinces and territories and, in some tabulations, census metropolitan areas. Then, there are the *Area Profiles* (see Section 3.3), one for each variable in the release. Initially, they are available for census divisions and subdivisions, with other geographic levels being available a month after release day. Other products come out over the following weeks and months. For the exact date on which a particular product is to be released, refer to the corresponding catalogue entry (see Table of Contents).

Major release dates

April 15, 1997	Population and dwelling counts
May 14, 1997	Agriculture (farm variables)
July 29, 1997	Age and sex
October 14, 1997	Marital status/common law Families (Part 1: type and structure) Structural type of dwelling and household size
November 4, 1997	Immigration and citizenship
December 2, 1997	Mother tongue Home language Official and non-official languages
Fall 1997	Agriculture (farm operator variables)
January 13, 1998	Data on Aboriginals
February 17, 1998	Ethnic origin Population group (visible minorities)
March 17, 1998	Labour market activity Industry and occupation Unpaid household activities Place of work Mode of transportation
April 14, 1998	Schooling Mobility and migration
May 12, 1998	Sources of income Family and household income
June 9, 1998	Families (Part 2: socio-economic data) Occupied private dwellings Households and housing costs
Fall 1998	Agriculture-population linkage database

1996 Census electronic products

To use census products issued in electronic form, users must have a computer system that meets the **minimum configuration** requirements stated below.

Census products on diskette

Census data on diskette are accompanied by display programs used at Statistics Canada: *Beyond 20/20™* for Windows™ and *C91* for DOS. To use these programs, customers need the following minimum configuration:

- *Beyond 20/20™*

IBM 386 or compatible
Microsoft® Windows™ 3.1
Microsoft® DOS 3.1
4 MB of RAM
1.44 MB, 3.5 in., DS HD floppy drive
mouse

- *C91*

IBM AT, XT or compatible
Microsoft® DOS 2.1
640 bytes of RAM
1.44 MB, 3.5 in., DS HD floppy drive

Standard census products on CD-ROM

Standard census products on CD-ROM are accompanied by a display program used at Statistics Canada: *Beyond 20/20™* for Windows™. To use these products, customers need the following minimum configuration:

IBM 486, 33 MHz, or compatible
8 MB of RAM
VGA monitor
2 X CD-ROM drive
mouse
Microsoft® Windows™ 3.x or Windows™ NT 4.0 or Windows™ 95

Other census products on CD-ROM

To use GeoRef, the postal code data CD-ROM and the Census of Agriculture CD-ROM, customers need the following minimum configuration:

IBM 486, 33 MHz, or compatible
12 MB of RAM
VGA monitor
CD-ROM drive
mouse
Microsoft® Windows™ 3.x or Windows™ NT or Windows™ 95

For more information

The catalogue contains detailed information about 1996 Census products and services (see Table of Contents). Users may also consult IPS on the Statistics Canada's Web site (<http://www.statcan.ca>) or contact the Statistics Canada regional reference centre in their area (see the list in the chapter entitled "How to Get Help").

1996 Census of Population

Overview of 1996 Census of Population Products and Services

The 1996 Census collected information from the population of Canada in order to paint a statistical portrait of the country and its inhabitants in terms of their demographic, cultural, social and economic characteristics. This portrait is disseminated in various ways and available in various forms.

The full line of census products and services is divided into five main categories: reference products, digital geography products, standard data products, analytical products and tabulation services. Each category is described in detail in a separate section (see Table of Contents).

Description

Reference products: This category consists of general reference products (*Catalogue, Dictionary, Census Handbook, technical reports*) and geographic reference products (*GeoRef, reference maps*). They cover various aspects of the census and are intended to support the use of census data. Prices start at \$15.

Digital geography products: There are two groups in this category. One group contains attribute information and comprises the *Block-face Data File*, the *Postal Code Conversion File* and the *Postal Codes by Federal Ridings File*. The other group contains spatial information and consists of the *digital boundary files*, *digital cartographic files*, *street network files* and *skeletal street network files*. The prices of geography products depend on their geographic coverage and other factors. For the 1996 Census, the prices of many geography products have been lowered.

Standard data products: Products in this category provide tabulations taken from the census database. They contain statistical information about every characteristic of the population, households, dwellings and families, characteristics that are measured in the census. They are the *Population and Dwelling Counts*, the *Nation* series, the *Area Profiles*, the *Basic Summary Tables*, the *Dimensions* series and the *Public Use Microdata Files*. The prices of standard data products are based on the specific features of each product.

Analytical products: Using 1996 Census data, Statistics Canada analysts will prepare articles on social, demographic and economic issues for publication in periodicals such as *Canadian Social Trends*, *Canadian*

Economic Observer and *Perspectives on Labour and Income*, and in professional statistics and demography journals. Subscription fees and single issue prices vary.

Tabulation services: These services are for users who cannot find what they need in the regular line of products and services. Tabulation services provide customers with different types of products, whose versatility depends on the content, geographic detail and media required. The services include custom and semi-custom products, geocoding service, geography custom services and custom maps.

The prices and production time of tabulation services vary, particularly with the type and complexity of the requirement.

Geographic areas

Census data are produced for a number of **standard** geographic areas. These areas are either administrative or statistical.

Administrative areas

provinces and territories
federal electoral districts (FEDs)*
census divisions (CDs)
census subdivisions (CSDs)
designated places (DPLs)
postal codes (FSAs and LDUs)

Statistical areas

census agricultural regions (CARs)
economic regions (ERs)
census consolidated subdivisions (CCSs)
census metropolitan areas (CMAs)
census agglomerations (CAs)
consolidated census metropolitan areas
consolidated census agglomerations
primary census metropolitan areas (PCMAAs)
primary census agglomerations (PCAs)
census tracts (CTs)
urban core, urban fringe and rural fringe
urban areas (UAs)
rural areas
enumeration areas (EAs)

* Most products are available for the 1987 Representation Order and some for the 1996 Representation Order.

Media

Many more census products are being offered in electronic form for the 1996 Census and, as a result, some of them can be made available more quickly than the corresponding products were for previous censuses. Users can obtain a number of products on diskette or CD-ROM, and key products continue to be available in hard-copy form (on paper), such as general reference products and area profiles (CDs, CSDs, CTs).

On Statistics Canada's Web site (<http://www.statcan.ca>), users can access certain reference products, analyses of major trends and short tables.

1. Reference Products

Reference products are designed to help users make the most of census data. The category is made up of general reference products and geographic reference products.

Description

General reference products

1996 Census Preview of Products and Services –

This publication presents an overview of the range of products and services based on the 1996 censuses of population and agriculture. Brief descriptions of census products and services are provided.

1996 Census Catalogue – First Edition – The catalogue provides full product descriptions, including information about the release date, price, format, table titles and catalogue numbers. There is a clear explanation of how to order products, and an order form is supplied to make it simpler. Also included are descriptions of the various services available to users, and a complete list of Statistics Canada contacts to serve the customer better.

1996 Census Dictionary – This product provides definitions of all the concepts, variables and geographic elements of the 1996 Census. The information provided for each variable includes the associated question number(s), the response categories or classifications, and remarks about points of interest, such as the variable's history. The dictionary also contains a guide to census geography and applications, a general index and easy-to-read charts.

The 1996 Census Handbook – This publication presents a non-technical overview of the entire census process, from content determination to product and service delivery. It also deals with data quality and confidentiality and provides examples of various census data applications. In addition, it contains a brief history of census-taking in Canada.

1996 Census Technical Reports – These reports take a close look at the quality of the data produced by the vast, complex undertaking that was the 1996 Census. Despite the considerable effort taken to ensure high quality at every stage, the census results are likely to contain some degree of error. The reports focus on collection and processing operations and provide the results of data quality evaluation and notes on comparability with previous censuses.

The technical reports are intended for experienced users, but they are written so that any census data user may find them helpful. In all, there are 19 technical reports covering a number of subjects and variables.

Geographic reference products

GeoRef – This is a powerful data retrieval and tabular output tool with software and data on a CD-ROM. Users can explore the links between standard geographic levels and determine geographic codes, names, and population and dwelling counts. *GeoRef* also provides EA correspondence data (for 1996 Census EAs and 1991 Census EAs) and an EA reference map listing that facilitates identification of appropriate EA reference maps.

Reference maps – These maps show the geography of the census and help users find the boundaries of census regions so that they can relate census data to physical locations. Over 7,500 reference maps are produced, covering various geographic levels, including enumeration areas (the unit used for census collection), federal electoral districts (ridings) according to the 1987 Representation Order, census tracts (neighbourhoods), census agglomerations and census metropolitan areas (large urban centres), census subdivisions (municipalities) and census divisions (counties and "municipalités régionales de comté"). Reference maps are sold individually or in sets.

Media

Reference products are available in hard-copy form, with the exception of *GeoRef*, which is published on CD-ROM.

Prices

The *1996 Census Preview of Products and Services* is available free of charge. Other general reference products cost between \$15 and \$25. Geographic reference products start at \$60.

1.1 General Reference Products

➤ 1996 Census Preview of Products and Services

The 1996 Census Preview of Products and Services offers a first look at the range of products and services available from the 1996 Census of Population and the Census of Agriculture. Included are descriptions, release times, media choices, prices and levels of geography for all products.

Features include new variables, more products in electronic form, improved geography products, census data by postal code and a revised pricing structure. Described are reference, geography, standard data and analytical products and custom data services. *The Preview* also lists the topics and dates of major census releases.

Price:	Canada: \$25	Other countries:	US\$25

➤ 1996 Census Technical Reports

Technical Reports examine the quality of data from the 1996 Census, a large and complex undertaking. While considerable effort was taken to ensure high quality standards throughout each step, the results are subject to a certain degree of error. Each report looks at the collection and processing operations, presents results from data evaluation, as well as notes on historical comparability.

Technical Reports are aimed at moderate and sophisticated users but are written in a manner which could make them useful to all census data users. There are nineteen reports, one on each of the following topics:

Postal Codes in the 1996 Census

1.2 Geography Reference Products**➤ GeoRef**

GeoRef is a powerful data retrieval and tabular output tool with software and data on a CD-ROM. GeoRef allows users to explore the links between all standard levels of geography and to determine geographic codes, names, and population and dwelling counts. In addition to the standard census areas, GeoRef provides EA correspondence data (for 1996 Census EAs and 1991 Census EAs) and an EA reference map listing that facilitates identification of appropriate EA reference maps.

GeoRef is completely redesigned for 1996 as a Windows-based product. For 1996, GeoRef includes information that was previously (1991 Census) available as separate products, namely, the EA reference lists (92-312, 92-313, 92-314, 92-315, 92-316, 92-317 and 92-318), EA Correspondence File (92F0076) and Geographic Attribute File (92F0075). Therefore, these products are not available separately for 1996.

Catalogue No.:	92F0085XCB	ISBN: 0-660-59272-X
Release:	April 15, 1997	
Media:	CD-ROM	
Price:	Canada: \$60	Other countries: US\$60

➤ Reference Maps

Reference maps identify census geographic areas and assist users in locating boundaries, allowing them to relate census data to actual physical locations. Over 7,500 reference maps are available for geographic areas that range in size from enumeration areas (the census collection unit) to federal electoral districts (Members of Parliament's ridings), from census tracts (neighbourhoods) to census agglomerations and census metropolitan areas (large urban centres) and from census subdivisions (municipalities) to census divisions (counties and "municipalités régionales de comté"). Maps in this series are available individually or as sets.

Federal Electoral District/Enumeration Area (FED/EA) Reference Maps (1987 Representation Order)

These reference maps show 1996 Census enumeration areas by federal electoral district. The federal electoral districts are based on the 1987 Representation Order which was in effect on Census Day (May 14, 1996). The FED/EA maps are designed for the general reference of EA boundaries. For more specific identification, users should refer to the more detailed EA Reference Map series (92F0088XPB, 92F0090XPB and 92F0091XPB). These maps are reproduced on demand. A reference guide is included.

Large Urban Enumeration Area (EA) Reference Maps

These black and white EA reference maps cover all 25 census metropolitan areas (CMAs) and the 18 census agglomerations (CAs) that are in the census tract program. Approximately 4,200 maps - generally one map per census tract - show enumeration area (EA) boundaries and codes on a background of detailed street networks and other visible features. Also shown on the maps are census tract, census subdivision, federal electoral district and CMA or CA boundaries. These maps are reproduced on demand. A reference guide is included.

The maps are completely redesigned for 1996. Each map fits on a 11" x 17" page size (approximately 27 cm x 43 cm). Map scales vary according to the size of the census tract; thus the maps cannot be cut and pasted together. In cases where the map is too congested to fit on one page, the map may be split into two or four parts. Clients are not charged for the extra split maps. All maps are computer-generated. Most were produced from Street Network File (SNF) information, but approximately 10% of the maps were generated from Natural Resources Canada's National Topographic Data Base (NTDB) files. The appearance and quality of the maps from the NTDB source are somewhat different from those from the SNF.

Small Urban Enumeration Area (EA) Reference Maps

Approximately 870 reference maps cover smaller urban municipalities (census subdivisions) not in the census tract program. The maps depict enumeration area (EA) boundaries and codes. Federal electoral districts are also shown on these maps. The size and scale of the maps vary, depending on the area covered. These maps are reproduced on demand. A reference guide is included.

Rural Enumeration Area (EA) Reference Maps

Approximately 2,400 maps depict enumeration area boundaries and codes in rural areas of Canada. Also shown are boundaries for census subdivisions, census divisions, federal electoral districts, census metropolitan areas and tracted census agglomerations. The maps, based on Natural Resources Canada's national topographic series, are at a scale of 1:50,000 or 1:250,000 for the 10 provinces and at a scale of 1:1,000,000 for the Yukon Territory and 1:4,000,000 for the Northwest Territories. These maps are reproduced on demand. A reference guide is included.

EA reference maps are also available for large urban centres (92F0090XPB) and small urban centres (92F0088XPB).

Census Division and Census Subdivision (CD/CSD) Reference Maps - Individual Maps

A total of 21 provincial maps showing the boundaries, names and codes for census divisions (areas such as counties and regional districts) and census subdivisions (such as cities, municipalities, towns, villages, other local municipal entities, townships and Indian reserves) are available for sale individually. The maps also show the boundaries for census metropolitan areas and census agglomerations. Each province is covered by one to four maps, with scales ranging from 1:375,000 to 1:6,000,000. The maps have the same general look as in 1991, although they have been produced using computer-assisted technology from digital geographic databases. The reference information, including water bodies, major roads and railroads, comes from the Digital Chart of the World (DCW). A reference guide is included.

All the maps are available in the publication *Standard Geographical Classification Manual, Volume 2* (12-572-XPB). This publication also includes three maps of Canada at 1:10,000,000 scale, one showing census divisions, one showing economic regions, and one showing point locations of census metropolitan areas and census agglomerations.

Census Metropolitan Area, Census Agglomeration and Census Tract (CMA/CA/CT) Reference Maps

This publication includes reference maps of all census metropolitan areas (55 maps covering 25 CMAs) and census agglomerations with census tracts (29 maps covering 18 CAs). The maps show boundaries and names of the census tracts, census subdivisions, primary census agglomerations which make up the CMAs/CAs, as well as boundaries of the urban core, urban fringe and rural fringe. Also shown are rivers, lakes, railroad tracks, provincial boundaries and other significant features. The map scales range from 1:25,000 to 1:2,000,000. The publication also includes a Canada map (1:10,000,000 scale) showing point locations of census metropolitan areas and census agglomerations in 1996.

The publications in the Census Tract Profile series contain corresponding maps for each census metropolitan area and census agglomeration. Note that the equivalent maps produced for non-tracted CAs in 1991 are not available for 1996.

Price:	\$10 per map; maximum \$25 per CMA or CA To order the complete set of maps, see 92-354-XPB.

2. Digital Geography Products

There are two types of digital geography products. One contains attribute information and comprises the *Block-face Data File*, the *Postal Code Conversion File*, the *Postal Codes by Federal Ridings File* and *GeoRef*. The other type contains spatial information and consists of the *digital boundary files*, *digital cartographic files*, *street network files* and *skeletal street network files*.

Description

Attribute Information:

Block-face Data File (BFDF) – This file contains 1996 population and dwelling counts for the block-faces of urban centres covered by the street network files. A block-face is generally one side of a city street between two consecutive intersections; it is also the smallest geographic unit available from Statistics Canada. The BFDF also links the block-face to all other levels of standard geography (enumeration areas and above) through geographic codes. The file contains street names with address ranges as well as coordinates for a point representing the approximate centre of each block-face. A reference guide is included.

Postal Code Conversion File (PCCF) – This file provides the relationship between Canada Post Corporation's six-character postal codes and the standard 1996 Census geographic areas (enumeration areas, municipalities, census tracts and so on). It also provides the x, y coordinates of a point representing the approximate location of the postal code to support mapping. A reference guide is included.

Postal Codes by Federal Ridings File (PCFRF) (1996 Representation Order) – This ASCII file provides a link between six-character postal codes and federal electoral districts. A federal electoral district is any place or territory entitled to elect a Member of Parliament (MP) to sit in the House of Commons.

The PCFRF is intended as a tool for use with administrative files containing postal codes. By using the postal code as a link, data from administrative files can be organized or tabulated by federal riding. With this PCFRF, more than 680,000 postal code records can be linked to the 301 federal electoral districts (1996 Representation Order). Semi-annual updates are available in January and July. Updates released in July include new postal codes effective in January of the release year, while updates issued in January

include new postal codes in use in July of the previous year. A reference guide is included.

GeoRef – This is a powerful data retrieval and tabular output tool with software and data on a CD-ROM. Users can explore the links between standard geographic levels and determine geographic codes, names, and population and dwelling counts. *GeoRef* also provides EA correspondence data (for 1996 Census EAs and 1991 Census EAs) and an EA reference map listing that facilitates identification of appropriate EA reference maps.

Spatial Information:

Digital boundary files (DBFs) and digital cartographic files (DCFs) – Digital boundary files show the official boundaries used for census collection. As a result, the boundaries often appear as straight lines extending into bodies of water. In digital cartographic files, the boundaries have been altered to follow the coastlines and shorelines of Canada's land mass, including major islands.

Street network files (SNFs) – These are digital files representing the street networks of most large urban centres in Canada. They also contain other visible physical and cultural features (such as hydrography, railroads and pipelines) and attribute information (e.g., street names, hydrographic names and address ranges for streets with assigned addresses). Streets and addresses are updated to reflect the information collected on Census Day, May 14, 1996. In combination with appropriate software owned by the user, street network files are useful in preparing routes, planning delivery services and mapping. A reference guide is included.

Skeletal street network files (SSNFs) – These are "thinned out" street network files consisting of cartographic reference features such as major streets (with street names but no address ranges) and some railway features used to define census tract boundaries.

Other geographic products

Users are reminded that there are geographic products in other categories, such as reference maps, population and dwelling counts, postal code counts, and geography custom products and services. An overview of all geography products and services is provided in Appendix A.

Geographic areas

Digital geography products are disseminated for a number of standard geographic areas. These areas are either administrative or statistical.

Administrative areas

- provinces and territories
- federal electoral districts (FEDs)*
- census divisions (CDs)
- census subdivisions (CSDs)
- designated places (DPLs)
- postal codes (FSAs and LDUs)

Statistical areas

- census agricultural regions (CARs)
- economic regions (ERs)
- census consolidated subdivisions (CCSs)
- census metropolitan areas (CMAs)
- census agglomerations (CAs)
- consolidated census metropolitan areas
- consolidated census agglomerations
- primary census metropolitan areas (PCMAS)
- primary census agglomerations (PCAs)
- census tracts (CTs)
- urban core, urban fringe and rural fringe
- urban areas (UAs)
- rural areas
- enumeration areas (EAs)

* Most products are available for the 1987 Representation Order and some for the 1996 Representation Order.

Media

The dissemination media – CD-ROM, diskette or paper – depends on the product. Some products are available in more than one medium. Spatial information files are provided in MapInfo™ for Windows™ and ARC/INFO® EXPORT format. Coordinates in the digital files are given in latitude and longitude and are based on the NAD27 datum.

Prices

The prices of digital geography products depend on various factors, including their geographic coverage. For the 1996 Census, the prices of many geography products have been lowered.

2.1 Attribute Information

➤ Block-face Data File (BFDF)

The Block-face Data File (BFDF) contains 1996 Census population and dwelling counts for block-faces in urban centres covered by the street network files (92F0024XDE). A block-face is generally one side of a city street between two consecutive intersections; it is also the smallest geographic unit available from Statistics Canada. The BFDF also links the block-face to all other levels of standard geography (enumeration areas and above) through geographic codes. The file includes street names with address ranges, as well as coordinates for a point representing the approximate centre of each block-face. A reference guide is included.

Block-face data files are available for areas that have corresponding street network files (92F0024XDE), such as areas within census metropolitan areas (CMAs) and census agglomerations (CAs) with census tracts.

Catalogue No.:	92F0026XDB
Release:	November 19, 1997
Media:	Diskette
Price:	Block-face data files are packaged by CMAs and CAs. Price is \$2,000 for Canada; \$100 to \$300, depending on the CMA/CA.

➤ Postal Code Conversion File (PCCF)

The Postal Code Conversion File (PCCF) provides a link between the six-character postal code and the standard 1996 Census geographic areas (such as enumeration areas, municipalities and census tracts). It also provides the x, y coordinates for a point representing the approximate location of the postal code to support mapping. A reference guide is included.

The PCCF is updated on a semi-annual basis. Updates released in July provide new postal codes as of January of the release year. Updates released in January provide new postal codes as of July of the previous year. Clients must purchase the Postal Code Conversion File at the initial cost; then, subsequent updated files (92F0027UDB) may be purchased at the update or subscription rate.

Catalogue No.:	92F0027XDB
Release:	December 4, 1997
Media:	Diskette
Price:	The PCCF is available as standard packages for Canada, provinces and territories, census metropolitan areas (CMAs) and some census agglomerations (CAs). Initial cost: \$9,000 for Canada; \$200 to \$3,550, depending on the province or territory; \$200 to \$1,450, depending on the CMA/CA. Clients who purchase the PCCF at the initial cost may purchase the updates at a flat rate that, in most cases, is much lower than the initial purchase price. An additional 25% discount on updates is given to PCCF update subscribers. The subscription will require that they pay in advance for at least one updated file per year until the PCCF reflecting the geography of the 2001 Census is released. CD-ROMs may be available for large files/orders.

➤ **Postal Code Conversion File (PCCF) - Update**

Clients must purchase the Postal Code Conversion File (92F0027XDB) at the initial cost; then, subsequent updated files may be purchased at the update rate.

Catalogue No.: 92F0027UDB
Release: July 1998
Media: Diskette
Price: Update - Flat rate: \$1,500 for Canada; \$100 to \$600, depending on the province or territory

Update - Subscription rate: \$1,125 for Canada; \$75 to \$450, depending on the province or territory

CD-ROMs may be available for large files/orders.

➤ **Postal Codes by Federal Ridings (1996 Representation Order) File (PCFRF)**

The Postal Codes by Federal Ridings (1996 Representation Order) File (PCFRF) provides a link between the six-character postal code and Canada's federal electoral districts (1996 Representation Order). A federal electoral district (FED) is any place or territorial area entitled to return a Member of Parliament (MP) to serve in the House of Commons and is commonly referred to as a federal riding.

The PCFRF is intended as a tool for use with administrative files containing postal codes. By using the postal code as a link, data from administrative files may be organized and/or tabulated by federal riding. This PCFRF allows a link of more than 680,000 postal code records to the 301 federal electoral districts (1996 Representation Order). Semi-annual updates (92F0028UDB) are available in January and July. Updates released in July provide new postal codes as of January of the release year. Updates released in January provide new postal codes as of July of the previous year. A reference guide is included.

Catalogue No.: 92F0028XDB
Release: December 4, 1997
Media: Diskette
Price: The PCFRF is available as standard packages for Canada and five regions. Initial cost: \$2,900 for Canada; \$1,000 per region (Atlantic provinces, Quebec, Ontario, Prairie provinces and Northwest Territories, British Columbia and Yukon Territory). Clients who purchase the PCFRF at the initial cost may purchase the updates at a flat rate (92F0028UDB) that is much lower than the initial purchase price.

➤ **Postal Codes by Federal Ridings (1996 Representation Order) File (PCFRF) - Update**

Semi-annual updates are available in January and July. Updates released in July provide new postal codes as of January of the release year. Updates released in January provide new postal codes as of July of the previous year.

Catalogue No.: 92F0028UDB
Release: July 1998
Media: Diskette
Price: Update - Flat rate: \$500 for Canada and \$200 per region

➤ GeoRef

GeoRef is a powerful data retrieval and tabular output tool with software and data on a CD-ROM. GeoRef allows users to explore the links between all standard levels of geography and to determine geographic codes, names, and population and dwelling counts. In addition to the standard census areas, GeoRef provides EA correspondence data (for 1996 Census EAs and 1991 Census EAs) and an EA reference map listing that facilitates identification of appropriate EA reference maps.

GeoRef is completely redesigned for 1996 as a Windows-based product. For 1996, GeoRef includes information that was previously (1991 Census) available as separate products, namely, the EA reference lists (92-312, 92-313, 92-314, 92-315, 92-316, 92-317 and 92-318), the EA Correspondence File (92F0076) and the Geographic Attribute File (92F0075). Therefore, these products are not available separately for 1996.

2.2 Spatial Information

➤ Digital Boundary Files/Digital Cartographic Files Series (DBFs/DCF)

Digital boundary files portray the official boundaries used for 1996 Census collection and, therefore, often extend as straight lines into bodies of water. In digital cartographic files, these boundaries were modified to follow the coastlines and shorelines on the perimeter of Canada's land mass, including major islands. The digital cartographic files also include a separate map layer showing lakes and some rivers and estuaries. This "water" layer can be used for additional reference purposes when mapping or displaying the boundaries. DBFs and DCFs provide a framework for mapping and geographic analysis that are possible using commercially available geographic information systems (GISs) or other mapping software. Digital boundary files may not be suitable for mapping or display where realistic shoreline is required. A reference guide is included.

Coordinates: Latitude/longitude

Format: ARC/INFO® EXPORT and MapInfo™ for Windows™

Provinces and Territories Digital Boundary File/Digital Cartographic File

The Provinces and Territories Digital Boundary File (DBF) and Digital Cartographic File (DCF) are two of a series of products that depict boundaries of standard geography levels. The boundaries of the provinces and territories were generalized to meet the requirements of most desk-top mapping packages. Consequently, these products are not fully consistent with others in the series.

Catalogue No.:	92F0029XDE
Release:	April 15, 1997
Media:	Diskette
Price:	These files are available as standard packages for Canada, each for \$60.

Federal Electoral Districts (1987 Representation Order) Digital Boundary File/Digital Cartographic File

The Federal Electoral Districts (1987 Representation Order) Digital Boundary File (DBF) and Digital Cartographic File (DCF) are two of a series of products that depict boundaries of standard geography levels. These two files were created by aggregating the component EA boundaries from the 1996 Census. They may differ slightly from the Digital Boundary File based on 1991 enumeration areas (92F0070XDB). The Federal Electoral Districts Digital Cartographic File is a new product. A generalized version of the DCF is also available for small scale mapping of the country as a whole.

Catalogue No.: 92F0030XDE
Release: April 15, 1997
Media: Diskette
Price: These files are available as standard packages for Canada, each for \$100.

Federal Electoral Districts (1996 Representation Order) Digital Cartographic File

The Federal Electoral Districts (1996 Representation Order) Digital Cartographic File depicts the boundaries of the federal electoral districts (FEDs) according to the 1996 Representation Order. Since this is not a standard level of geography for the 1996 Census, the cartographic file was created with a different methodology and, therefore, is not consistent with other files in the series.

Users should be aware that the FED boundaries used for the taking of the 1996 Census were based on the 1987 Representation Order. The 1996 Representation Order was proclaimed on January 8, 1996, and is in force on the first dissolution of Parliament that occurs at least one year after its proclamation.

Catalogue No.: 92F0031XDE
Release: April 15, 1997
Media: Diskette
Price: This file is available as a standard package for Canada, for \$100.

Census Divisions Digital Boundary File/Digital Cartographic File

The Census Divisions Digital Boundary File (DBF) and Digital Cartographic File (DCF) are two of a series of products that depict boundaries of standard geography levels. A generalized version of the DCF is also available for small scale mapping of the country as a whole.

Catalogue No.: 92F0032XDE
Release: April 15, 1997
Media: Diskette
Price: These files are available as standard packages for Canada, each for \$100.

Census Consolidated Subdivisions Digital Boundary File/Digital Cartographic File

The Census Consolidated Subdivisions Digital Boundary File (DBF) and Digital Cartographic File (DCF) are two of a series of products that depict boundaries of standard geography levels.

Catalogue No.: 92F0033XDE
Release: April 15, 1997
Media: Diskette
Price: These files are available as standard packages for Canada, provinces and territories. Price is \$500 for Canada, \$100 for each individual province or territory.

Census Subdivisions Digital Boundary File/Digital Cartographic File

The Census Subdivisions Digital Boundary File (DBF) and Digital Cartographic File (DCF) are two of a series of products that depict boundaries of standard geography levels.

Catalogue No.:	92F0034XDE
Release:	April 15, 1997
Media:	Diskette
Price:	These files are available as standard packages for Canada, provinces, territories, CMAs and CAs. Price is \$1,200 for Canada, \$100 to \$300, depending on the province or territory, \$100 for CMAs or CAs. CD-ROMs may be available for large files/orders.

Census Metropolitan Areas/Census Agglomerations Digital Boundary File/Digital Cartographic File

The Census Metropolitan Areas/Census Agglomerations Digital Boundary File (DBF) and Digital Cartographic File (DCF) are two of a series of products that depict boundaries of standard geography levels.

Catalogue No.:	92F0035XDE
Release:	April 15, 1997
Media:	Diskette
Price:	These files are available as standard packages for Canada, each for \$100.

Census Tracts Digital Boundary File/Digital Cartographic File

The Census Tracts Digital Boundary File (DBF) and Digital Cartographic File (DCF) are two of a series of products that depict boundaries of standard geography levels. Users of the 1991 Census Tracts Digital Cartographic File will notice a major difference between the 1991 product and the 1996 product. In 1991, all bodies of water were integrated with the boundaries on a single map layer. The 1996 boundaries follow the coastlines and shorelines on the perimeter of Canada's land mass, including major islands. Users can see the remaining shorelines (inland bodies of water) by overlaying the separate water layer. The 1996 census tracts DCFs are consistent with all other levels of standard geography. This was not the case in 1991.

Catalogue No.:	92F0036XDE
Release:	April 15, 1997
Media:	Diskette
Price:	These files are available as standard packages for Canada, provinces, census metropolitan areas and tracted census agglomerations (CMAs/CAs). Price is \$900 for Canada; \$100 to \$200, depending on the urban centre; \$100 to \$600, depending on the province or territory.

Note that when ordering all CMA/CA files for the province of Quebec, the Ontario part of the Ottawa - Hull CMA is excluded and the reverse is true when ordering all CMA/CA files for Ontario (i.e. the Quebec part is excluded). However, when ordering the Ottawa - Hull CMA file, both Ontario and Quebec parts are included. CD-ROMs may be available for large files/orders.

Urban Areas Digital Boundary File/Digital Cartographic File

The Urban Areas Digital Boundary File (DBF) and Digital Cartographic File (DCF) are two of a series of products that depict boundaries of standard geography levels.

Catalogue No.: 92F0037XDE
Release: April 15, 1997
Media: Diskette
Price: These files are available as standard packages for Canada, each for \$100. CD-ROMs may be available for large files/orders.

Designated Places Digital Boundary File/Digital Cartographic File

The Designated Places Digital Boundary File (DBF) and Digital Cartographic File (DCF) are two of a series of products that depict boundaries of standard geography levels.

Catalogue No.: 92F0038XDE
Release: April 15, 1997
Media: Diskette
Price: These files are available as standard packages for Canada, each for \$100.

Forward Sortation Areas Digital Cartographic File

The Forward Sortation Areas Digital Cartographic File depicts FSA boundaries derived from postal codes captured from the 1996 Census questionnaires. By analysing the postal codes reported by census households, a single FSA was assigned to each enumeration area (most often the FSA reported by the largest number of census households). FSA polygons were formed by grouping enumeration areas. Therefore, the census-based FSA boundaries respect enumeration area boundaries.

Catalogue No.: 92F0039XDE
Release: April 15, 1997
Media: Diskette
Price: This file is available as a standard package for Canada for \$400. CD-ROMs may be available for large files/orders.

Enumeration Areas Digital Boundary File/Digital Cartographic File

The Enumeration Areas Digital Boundary File (DBF) and Digital Cartographic File (DCF) are two of a series of products that depict boundaries of standard geography levels.

Catalogue No.: 92F0040XDE
Release: April 15, 1997
Media: Diskette
Price: These files are available as standard packages for Canada, provinces, territories and large urban centres. Price is \$9,800 for Canada; \$100 to \$1,400, depending on the urban centre; \$100 to \$3,200, depending on the province or territory. CD-ROMs may be available for large files/orders.

➤ Street Network Files (SNFs)

The street network files (SNFs) are digital files representing the street network for most large urban centres in Canada. The files also contain other visible physical and cultural features (such as hydrography, railroads, pipelines) and attribute information (for example, street and hydrographic names, and address ranges for streets with assigned addresses). Streets and addresses are updated to reflect the information collected on Census Day - May 14, 1996. In combination with the user's appropriate software, the street network files are useful for route planning, delivery services and mapping. A reference guide is included.

A total of 344 municipalities is covered by SNFs - 328 in census metropolitan areas (CMAs) and census agglomerations (CAs) with census tracts, 5 in CAs without census tracts and 11 outside CMAs and CAs. This coverage represents 62% of Canada's population but less than 1% of the land area. Some CMAs and CAs are only partially covered by street network files. Users will find a comprehensive listing of CSDs entirely or partially covered by street network files in Appendix N of the 1996 Census Dictionary (92-351-XPE). Prior to 1991, street network files were called area master files (AMFs). Note that the AMF format is not available for 1996.

Coordinates: Latitude/longitude

Format: ARC/INFO® EXPORT and MapInfo™ for Windows™

Catalogue No.: 92F0024XDE

Release: November 19, 1997

Media: Diskette

Price: Street network files are packaged by CMAs and CAs. Price is \$20,000 for Canada; \$200 to \$3,300, depending on the CMA/CA. CD-ROMs may be available for large files/orders.

➤ Skeletal Street Network Files (SSNFs)

The skeletal street network files (SSNFs) are "thinned out" street network files consisting of cartographic reference features, such as major streets (with street names but no address ranges) and some railway features used to define the census tract boundaries.

The SSNFs have been produced solely to provide some cartographic reference features when producing thematic maps with the digital cartographic files.

Coordinates: Latitude/longitude

Format: ARC/INFO® EXPORT and MapInfo™ for Windows™

Catalogue No.: 92F0025XDE

Release: December 4, 1997

Media: Diskette

Price: Skeletal street network files (SSNFs) are available as standard packages for census metropolitan areas and some census agglomerations. Price is \$2,900 for Canada; \$100 to \$200, depending on the CMA/CA. CD-ROMs may be available for large files/orders.

3. Standard Data Products

The 1996 Census provides a wide range of standard data products, combining variables in different ways to meet users' needs. In all, six series of standard data products are available: Population and Dwelling Counts, The Nation series, Area Profiles, Basic Summary Tabulations, the Dimensions series and Public Use Microdata Files.

Chapter 3 of the catalogue contains a separate introduction to each series, since each one has its own special features and comprises many different products. As in previous sections, the introduction summarizes the main characteristics of the series.

Note: A few products in this category relate to geography. An overview of all geography products and services is provided in Appendix A.

3.1 Population and Dwelling Counts

The first information released during the census cycle is dwelling counts and data on the geographic distribution of Canada's population, for all geographic levels.

Description

A National Overview - This publication consists of 20 tables providing population and dwelling counts from the 1996 Census of Canada. The geographic areas covered are provinces and territories, federal electoral districts (1987 Representation Order), census divisions, census subdivisions, designated places, census metropolitan areas and census agglomerations, primary census metropolitan areas and primary census agglomerations, and urban and rural areas. The geographic boundaries of these areas are those which were in force on January 1, 1996 (geographic reference date for the 1996 Census). The publication also includes population and dwelling counts for forward sortation areas (first three characters of the postal code) as reported by census respondents on Census Day (May 14, 1996). Forward sortation areas and designated places are included for the first time.

The tables in this publication can also be obtained individually on diskette. Two tables that do not appear in the publication are also available:

Population and Dwelling Counts, for Census Tracts, 1996 Census - 100% Data - This table shows the 1996 population and dwelling counts for census tracts by census metropolitan area and census agglomeration.

Population and Dwelling Counts, for Enumeration Areas, 1996 Census - 100% Data - This table shows the 1996 population and dwelling counts for enumeration areas by federal electoral district (1987 Representation Order).

GeoRef - This is a powerful data retrieval and tabular output tool with software and data on a CD-ROM. Users can explore the links between standard geographic levels and determine geographic codes, names, and population and dwelling counts. *GeoRef* also provides EA correspondence data (for 1996 Census EAs and 1991 Census EAs) and an EA reference map listing that facilitates identification of appropriate EA reference maps.

Postal Code Counts - 1996 Census - This is a new product for 1996. It contains population and dwelling counts for all six-character postal codes reported by respondents. The population and dwelling counts are presented by individual postal code and forward sortation area (FSA - first three characters of the six-character postal

code). The data come with Windows™-based software that enables users to perform simple data manipulations such as searching the data set for specific postal codes, importing groups of postal codes for which counts are required, and exporting groups of postal codes. Documentation and reference material are provided in electronic form on the CD-ROM.

Media

A National Overview is available in print format, and the 20 tables it contains are also available individually on diskette. The two tables that do not appear in the publication are available on diskette. *GeoRef* and *Postal Code Counts* are available on CD-ROM.

Prices

The publication costs \$40. The individual tables on diskette and the CD-ROMs cost \$60 each.

► A National Overview

This publication provides population and dwelling counts established by the 1996 Census of Canada. The levels of geography covered are: provinces and territories, federal electoral districts (1987 Representation Order), census divisions, census subdivisions, designated places, census metropolitan areas and census agglomerations, primary census metropolitan areas and primary census agglomerations, urban and rural areas. The geographic boundaries of these areas are those that were in force on January 1, 1996 (geographic reference date for the 1996 Census of Canada). The publication also includes population and dwelling counts for forward sortation areas (first three characters of the postal code) as reported by census respondents on Census Day (May 14, 1996). Forward sortation areas and designated places are included for the first time.

Users of this publication may be interested in consulting the reference maps showing the name, boundaries and location of census divisions and census subdivisions (12-572-XPB), as well as those of the census metropolitan areas, census agglomerations and census tracts (92-354-XPB).

This publication contains the following tables:

1. Population and Dwelling Counts, for Canada, Provinces and Territories, 1991 and 1996 Censuses - 100% Data
2. Population and Dwelling Counts, for Census Metropolitan Areas in Decreasing Order of 1996 Population, 1991 and 1996 Censuses - 100% Data
3. Population and Dwelling Counts, for Census Metropolitan Areas in Alphabetical Order, 1991 and 1996 Censuses - 100% Data
4. Population and Dwelling Counts, for Census Agglomerations in Alphabetical Order, 1991 and 1996 Censuses - 100% Data
5. Census Metropolitan Areas and Census Agglomerations in Decreasing Order of Population, 1996 Census - 100% Data
6. Population Counts, Showing Distribution Inside and Outside Census Metropolitan Areas and Census Agglomerations, for Canada, Provinces and Territories, 1996 Census - 100% Data
7. Population Counts, for Census Metropolitan Areas, Census Agglomerations, Primary Census Metropolitan Areas and Primary Census Agglomerations by Urban Core, Urban Fringe, Rural Fringe and Urban Areas, 1996 Census - 100% Data
8. Population and Dwelling Counts, for Census Metropolitan Areas, Census Agglomerations, Primary Census Metropolitan Areas, Primary Census Agglomerations and Component Census Subdivisions (Municipalities), 1991 and 1996 Censuses - 100% Data
9. Population and Dwelling Counts, for Census Divisions, 1991 and 1996 Censuses - 100% Data
10. Population and Dwelling Counts, for Census Divisions, Census Subdivisions (Municipalities) and Designated Places, 1991 and 1996 Censuses - 100% Data
11. Census Subdivisions (Municipalities) With the Largest Population, 1996 Census - 100% Data
12. Census Subdivisions (Municipalities) With the Greatest Percentage Population Growth, 1991 and 1996 Censuses - 100% Data
13. Census Subdivisions (Municipalities) With the Greatest Percentage Population Decline, 1991 and 1996 Censuses - 100% Data

14. Population Counts, for Urban Areas, Showing Census Subdivisions (Municipalities), 1996 Census - 100% Data
15. Urban and Rural Population Counts, for Provinces and Territories, 1996 Census - 100% Data
16. Population and Dwelling Counts, for Urban Areas, 1991 and 1996 Censuses - 100% Data
17. Population Counts, Showing Urban Population Size Groups and Rural Areas, for Census Divisions, 1996 Census - 100% Data
18. Urban and Rural Population, for Census Divisions and Census Subdivisions (Municipalities), 1996 Census - 100% Data
19. Population and Dwelling Counts, for Federal Electoral Districts (1987 Representation Order), 1991 and 1996 Censuses - 100% Data
20. Population and Dwelling Counts, for Forward Sortation Areas as Reported by the Respondents, 1996 Census - 100% Data

Catalogue No.: 93-357-XPB
Release: April 15, 1997
Media: Paper
Price: Canada: \$40

ISBN: 0-660-59283-5

Other countries: US\$40

The tables found in publication 93-357-XPB are also available individually on diskette at \$60 per table in Canada and US\$60 per table in other countries. They will be released in the fourth quarter of 1997. A brief description of these individual tables, as well as their catalogue numbers, are listed below.

➤ **Population and Dwelling Counts, for Canada, Provinces and Territories, 1991 and 1996 Censuses - 100% Data**

This table compares the 1991 and 1996 population and dwelling counts for Canada, the provinces and the territories. It also shows the percentage change in the population between 1991 and 1996, as well as the number of dwellings in Canada, the provinces and territories in 1996.

Catalogue No.: 93F0032XDB96001

➤ **Population and Dwelling Counts, for Census Metropolitan Areas in Decreasing Order of 1996 Population, 1991 and 1996 Censuses - 100% Data**

This table shows the census metropolitan areas listed by decreasing order of population in 1996. Apart from the 1991 and 1996 population counts, this table includes the percentage change between 1991 and 1996, the number of dwellings in 1996 for each census metropolitan area, as well as the 1991 national population ranking.

Catalogue No.: 93F0032XDB96002

➤ **Population and Dwelling Counts, for Census Metropolitan Areas in Alphabetical Order, 1991 and 1996 Censuses - 100% Data**

This table contains the population counts for 1991 and 1996 for census metropolitan areas in alphabetical order. It also includes the percentage change in the population between 1991 and 1996, the number of dwellings in 1996, the land area, the population density and the population rank of the area at both the national and provincial levels for 1996.

Catalogue No.: 93F0032XDB96003

➤ **Population and Dwelling Counts, for Census Agglomerations in Alphabetical Order, 1991 and 1996 Censuses - 100% Data**

This table contains a list of all census agglomerations in Canada, in alphabetical order, as well as their population counts for 1991 and 1996. The table also includes the percentage change in the population between these two census years and the number of dwellings in 1996.

Catalogue No.: 93F0032XDB96004

➤ **Census Metropolitan Areas and Census Agglomerations in Decreasing Order of Population, 1996 Census - 100% Data**

This table shows all the census metropolitan areas and census agglomerations in Canada by decreasing order of population for 1996. It includes population ranking at the provincial level.

Catalogue No.: 93F0032XDB96005

➤ **Population Counts, Showing Distribution Inside and Outside Census Metropolitan Areas and Census Agglomerations, for Canada, Provinces and Territories, 1996 Census - 100% Data**

This table makes it possible to compare the number and percentage of persons living in census metropolitan areas and census agglomerations, in relation to the number and percentage of persons living outside these areas, for Canada, the provinces and territories. It also includes total population counts by province and territory.

Catalogue No.: 93F0032XDB96006

➤ **Population Counts, for Census Metropolitan Areas, Census Agglomerations, Primary Census Metropolitan Areas and Primary Census Agglomerations by Urban Core, Urban Fringe, Rural Fringe and Urban Areas, 1996 Census - 100% Data**

This table shows the 1996 population counts for census metropolitan areas, census agglomerations, their urban cores, urban fringes and rural fringes, with their primary census metropolitan areas and primary census agglomerations.

Catalogue No.: 93F0032XDB96007

➤ **Population and Dwelling Counts, for Census Metropolitan Areas, Census Agglomerations, Primary Census Metropolitan Areas, Primary Census Agglomerations and Component Census Subdivisions (Municipalities), 1991 and 1996 Censuses - 100% Data**

This table contains the population counts for 1991 and 1996 for census metropolitan areas and census agglomerations in alphabetical order. For each census metropolitan area and census agglomeration, the component census subdivisions (municipalities) are shown as well as primary census metropolitan areas and primary census agglomerations. It also includes the percentage change in the population between 1991 and 1996, the number of dwellings in 1996, the land area, the population density and the population rank of the area at the national level for 1996.

Catalogue No.: 93F0032XDB96008

➤ **Population and Dwelling Counts, for Census Divisions, 1991 and 1996 Censuses - 100% Data**

This table contains the 1996 population counts for census divisions by province and territory. The table also contains the 1991 population counts, the percentage change in the population between 1991 and 1996, the number of dwellings in 1996, the land area, the population density and the population ranking at both the national and provincial levels for 1996.

Catalogue No.: 93F0032XDB96009

➤ **Population and Dwelling Counts, for Census Divisions, Census Subdivisions (Municipalities) and Designated Places, 1991 and 1996 Censuses - 100% Data**

This table contains the 1996 population counts for census subdivisions (municipalities) and designated places by census division, province and territory. The table also contains the census subdivision type and designated place type, the 1991 population counts, the percentage change in the population between 1991 and 1996, the number of dwellings in 1996, the land area, the population density and the population ranking at both the national and provincial levels for 1996.

Catalogue No.: 93F0032XDB96010

➤ **Census Subdivisions (Municipalities) With the Largest Population, 1996 Census - 100% Data**

This table shows the 50 largest census subdivisions (municipalities) in Canada, in decreasing order based on the 1996 population counts, along with the percentage change in their population counts from 1991 and 1996 and their population density.

Catalogue No.: 93F0032XDB96011

➤ **Census Subdivisions (Municipalities) With the Greatest Percentage Population Growth, 1991 and 1996 Censuses - 100% Data**

This table lists the 50 census subdivisions (municipalities) with a minimum 1996 Census population of 5,000 that showed the largest percentage population growth between 1991 and 1996, along with their population density.

Catalogue No.: 93F0032XDB96012

➤ **Census Subdivisions (Municipalities) With the Greatest Percentage Population Decline, 1991 and 1996 Censuses - 100% Data**

This table lists the 50 census subdivisions (municipalities) with a minimum 1996 Census population of 5,000 that showed the largest percentage population decline between 1991 and 1996, along with their population density.

Catalogue No.: 93F0032XDB96013

➤ **Population Counts, for Urban Areas, Showing Census Subdivisions (Municipalities), 1996 Census - 100% Data**

This table shows the 1996 population counts for urban areas, listed in alphabetical order, with their component census subdivisions (municipalities).

Catalogue No.: 93F0032XDB96014

➤ **Urban and Rural Population Counts, for Provinces and Territories, 1996 Census - 100% Data**

This table compares 1996 urban and rural populations for Canada, the provinces and territories.

Catalogue No.: 93F0032XDB96015

➤ **Population and Dwelling Counts, for Urban Areas, 1991 and 1996 Censuses - 100% Data**

This table shows both the 1991 and 1996 population counts for the urban areas, in alphabetical order. It also contains the percentage change in the population between 1991 and 1996, the number of dwellings in 1996 and the population ranking of the area at the national and provincial levels; however, this information is available in the GeoRef CD-ROM (92F0085XCB).

Catalogue No.: 93F0032XDB96016

➤ **Population Counts, Showing Urban Population Size Groups and Rural Areas, for Census Divisions, 1996 Census - 100% Data**

This table shows the distribution of the population by urban population size group, for census divisions. It can be used to compare the population counts for urban areas with those of rural areas, since the latter are also shown by census division.

Catalogue No.: 93F0032XDB96017

➤ **Urban and Rural Population, for Census Divisions and Census Subdivisions (Municipalities), 1996 Census - 100% Data**

This table contains the 1996 urban and rural population counts, in alphabetical order of census divisions and census subdivisions (municipalities).

Catalogue No.: 93F0032XDB96018

➤ **Population and Dwelling Counts, for Federal Electoral Districts (1987 Representation Order), 1991 and 1996 Censuses - 100% Data**

This table shows federal electoral districts (according to the 1987 Representation Order) in alphabetical order, by province and territory, and the population counts for each in 1991 and 1996, the percentage change in the population counts between 1991 and 1996, as well as the number of dwellings in 1996.

Catalogue No.: 93F0032XDB96019

➤ **Population and Dwelling Counts, for Forward Sortation Areas as Reported by the Respondents, 1996 Census - 100% Data**

This table contains a list, in alphabetical order, by province and territory, of all forward sortation areas reported in the census, as well as their population and dwelling counts for 1996.

Catalogue No.: 93F0032XDB96020

The two following tables are available individually on diskette and do not appear in the Population and Dwelling Counts publication. The price is \$60 per table in Canada and US\$60 per table in other countries. They will be released in the fourth quarter of 1997.

➤ **Population and Dwelling Counts, for Census Tracts, 1996 Census - 100% Data**

This table shows the 1996 population and dwelling counts for census tracts by census metropolitan area and census agglomeration.

Catalogue No.: 93F0032XDB96021

➤ **Population and Dwelling Counts, for Enumeration Areas, 1996 Census - 100% Data**

This table shows the 1996 population and dwelling counts for enumeration areas by federal electoral district (1987 Representation Order).

Catalogue No.: 93F0032XDB96022

Population and dwelling counts are also available in two other products.

➤ **GeoRef**

GeoRef is a powerful data retrieval and tabular output tool with software and data on a CD-ROM. GeoRef allows users to explore the links between all standard levels of geography and to determine geographic codes, names, and population and dwelling counts. In addition to the standard census areas, GeoRef provides EA correspondence data (for 1996 Census EAs and 1991 Census EAs) and an EA reference map listing that facilitates identification of appropriate EA reference maps.

GeoRef is completely redesigned for 1996 as a Windows-based product. For 1996, GeoRef includes information that was previously (1991 Census) available as separate products, namely, the EA reference lists (92-312, 92-313, 92-314, 92-315, 92-316, 92-317 and 92-318), EA Correspondence File (92F0076) and Geographic Attribute File (92F0075). Therefore, these products are not available separately for 1996.

➤ Postal Code Counts - 1996 Census

Postal Code Counts - 1996 Census is a new product for 1996 that contains population and dwelling counts for all six-character postal codes reported by respondents. The population and dwelling counts are provided by individual postal code and forward sortation area (FSA - first three characters of the six-character postal code). The data are provided with Windows-based software that enables users to perform simple data manipulations such as searching the data set for specific postal codes, importing groups of postal codes for which counts are required and exporting groupings of postal codes. Documentation and reference material are contained in electronic form on the CD-ROM.

3.2 The Nation Series

The Nation is the first series to release data on characteristics of the population, including demographic, social, cultural, labour force and income variables, and details on dwellings, households and families. In general, the data are provided for Canada, provinces and territories. For some characteristics, data are available at the census metropolitan area level. Some tables include comparisons with data from earlier censuses.

Media

The 142 tables in *The Nation* series are available individually or as a set on diskette. In addition, four CD-ROMs containing cumulative data are available throughout the dissemination process (exact release dates are given on the pages that follow).

On the day that major releases are announced (see the Introduction), a few excerpts from *The Nation* series tables will be available on Statistics Canada's Web site (<http://www.statcan.ca>).

Prices

The price of each individual table, each set of tables and each CD-ROM is \$60.

3.3 Area Profiles

The Area Profiles series provides a statistical overview of geographic areas. In the 1996 Census, for the first time, the components of a profile will be available on the same day as the data are released (see the Introduction). From October 1997 to June 1998, data at the census division and subdivision level will be available on the day a variable is released. The components of profiles in electronic form are listed in Appendix B.

Geographic areas

Area profiles are available for the following geographic areas:

- census divisions and subdivisions (CDs and CSDs)
- census metropolitan areas and census agglomerations (CMAs and CAs)
- census tracts (CTs) of CMAs and some tracted CAs
- federal electoral districts*
- enumeration areas
- forward sortation areas

* As per the 1987 Representation Order or the 1996 Representation Order.

Media

Area profiles are available on diskette or CD-ROM. Census division and subdivision as well as census tract profiles will also be available in print form later in the dissemination process, after all the components have been released. Profiles on diskette contain more details about the breakdown of variables than profiles that will be issued in paper format.

Two CD-ROMs will be released in September 1998: one containing profiles for all geographic levels in Canada except forward sortation areas and enumeration areas, and the other containing profiles of all geographic levels for Canada or for individual provinces or territories.

Prices

Area profile prices range from \$65 to \$8,100, depending on the format and geographic level.

3.4 Basic Summary Tabulations

This series provides cross-tabulations of two or more variables at fine levels of geographic detail. The Basic Summary Tabulations has been revised to include only the most frequently used tables.

Media

Basic Summary Tabulations are available on diskette.

Prices

There is a flat fee of \$60, plus \$1 for each of the first 100 geographic areas, and \$0.05 for each additional area.

3.5 Dimensions Series

This series clearly illustrates the analytic potential of census data. It presents statistical information on topics of public interest. Some tables examine historical trends, while others deal with population subgroups. The Dimensions series is also packaged so that users can do more detailed analysis themselves.

Media

Seven CD-ROMs containing information on specific subjects are available. The tables are also available on diskette.

Prices

The price is \$60 for each table or CD-ROM.

3.6 Public Use Microdata Files (PUMFs)

The public use microdata files (PUMFs) contain samples of anonymous responses from 1996 Census questionnaires. The files are powerful research tools. Users can combine or manipulate variables to meet their own data and research needs. They can generate tables not included in other census products or analyse relationships between variables with a number of statistical tests. The files have been carefully checked to ensure the complete confidentiality of individual responses. In addition, geographic identifiers have been restricted to provinces, territories and large metropolitan areas.

Description

Three PUMFs are available: the Individuals File, the Households and Housing File, and the Families File.

Individuals File – This file provides data on the characteristics of the population, such as labour force activity and income. It contains over 100 variables.

Households and Housing File – This file provides housing information, such as structural type, number of rooms, and shelter costs, as well as details of household composition and socio-economic information concerning the household maintainers and their families. It contains more than 100 variables.

Families File – This file contains information about family composition, which can be combined with over 80 variables, including labour force activity, census family income and non-family person income.

Geographic areas

PUMFs are available for the following geographic areas: Canada, provinces and territories, census metropolitan areas and some large municipalities.

Media

The files are available on CD-ROM and magnetic tape. Files on CD-ROM come with a display software used at Statistics Canada, *Beyond 20/20™*.

Prices

The price is \$1,000 for the first file (magnetic tape or CD-ROM), \$300 for the second file and \$200 for the third file.

Public Use Microdata Files

The 1996 Census public use microdata files (PUMFs) contain samples of anonymous responses to the 1996 Census questionnaire. The files have been carefully scrutinized to ensure the complete confidentiality of the individual responses. Three files are available: the Individuals File, the Households and Housing File, and the Families File. PUMFs enable the development of statistical information about Canadians, the families and households to which they belong and the dwellings in which they live.

Microdata files are unique among census products in that they give users access to non-aggregated data. This makes PUMFs powerful research tools. Each file contains anonymous individual responses on a large number of variables. The PUMF user can group and manipulate these variables to suit his/her own data and research requirements. Tabulations not included in other census products can be created or relationships between variables can be analysed by using different statistical tests. PUMFs provide quick access to a comprehensive social and economic database about Canada and its people.

All subject matter covered by the census is included in the microdata files. However, to ensure the anonymity of the respondents, geographic identifiers have been restricted to the provinces/territories and large metropolitan areas.

Microdata files have traditionally been made available on magnetic tape, which requires access to a mainframe computer. As in 1991, the 1996 PUMFs will also be available on CD-ROM for microcomputer applications.

The 1996 PUMFs contain data based on a 3% sample of the population enumerated in the census. In order to protect the confidentiality of the information provided by individual respondents, special measures were taken.

Data for small geographic areas are not available in this product. The user will find information for only the provinces, the territories, selected census metropolitan areas and selected census subdivisions. Furthermore, the data have been aggregated in such a way as to preserve confidentiality while at the same time providing as much detail as possible in order to maintain the analytical value of the file. For example, the data on occupations do not indicate "Physician", but rather the more general category "Occupations in Medicine and Health". This category also includes other medical occupations, such as "Nurse". For some variables, such as ethnic origin, less detailed information is available for some geographic areas than for other areas.

A certain percentage of records with specific characteristics were swapped. The permutation consisted of exchanging values of a subset of variables between some records and did not affect the sample size in each geographic area.

For selected variables, data were suppressed from some records. The code "Not available" was assigned to those records.

Income data were rounded so as not to exceed pre-set upper and lower income limits.

The microdata files contain a record for each selected unit in the sample. Each record contains a certain number of characteristics or variables. Thus, each of these units represents, in addition to itself, many other units not part of the sample. To represent all these other units in the estimation process, a variable called WEIGHT (weighting factor) has been added to the files; it corresponds to the number of units (including the unit selected) represented by each record from the files. The sample selection method was carried out in such a way that this variable would be constant for all the records. The sample is referred to as a self-weighting sample. The WEIGHT variable (equal to 33 1/3) is represented by 33.3333 in the files. The weighting factor therefore indicates the number of times a record must be repeated to obtain population estimates.

The geographic coverage is:

CSD level: Montréal, Laval, Ottawa, Toronto, North York, Scarborough, Mississauga, Etobicoke, Hamilton, Edmonton, Vancouver and Surrey;

CMA level: Halifax, Québec, Montréal, Sherbrooke, Trois-Rivières, Ottawa - Hull, Oshawa, Toronto, Hamilton, St. Catharines - Niagara, Kitchener, London, Windsor, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver and Victoria.

➤ Individuals File

This file provides data on the characteristics of the population such as ethnic origin, labour force activity and income levels, to name only a few. It contains more than 100 variables.

Catalogue No.: 95M0010XTE
Release: First quarter of 1999
Media: Magnetic tape
Price: Canada: \$1,000 Other countries: US\$1,000
 \$1,000 for the first file, \$300 for the second file and \$200 for the third file

4. Analytical Products

Throughout 1998 and 1999, Statistics Canada analysts will produce general-interest articles on social, demographic and economic issues using 1996 Census data. The articles will appear in Statistics Canada periodicals, such as *Canadian Social Trends*, *Canadian Economic Observer* and *Perspectives on Labour and Income*, and in other professional statistics and demography journals. In addition, *The Daily* contains announcements of major census data releases, highlights of analytical studies and a summary of key trends.

The *Focus on Canada* series and the monographs will not be produced for 1996.

5. Tabulation Services

The Tabulation Services provide products and services aimed at meeting users' needs in a more detailed or specific form than is available in standard products. The flexibility built into these services means that many demanding and complex data requests may be accommodated. Therefore, users can obtain products which are designed to meet their specific data needs.

The Tabulation Services offer three service types, standard products, semi-custom products and custom products, with varying degrees of flexibility in terms of content, geographic level and medium. Experienced census consultants are available to advise clients on the service that will best suit their needs.

Product prices and delivery times vary with the type of service requested. The more customized the product, the greater the price and the longer the delivery time. Prices are subject to change.

Clients will be served by the census consultants at the Statistics Canada Regional Reference Centre nearest them, with the exception of federal government clients who should contact Statistics Canada's head office in Ottawa.

➤ Custom Products

Custom cross-tabulations are the most flexible and specialized product type. Products are developed to meet the needs of individual users, according to their exact requirements in terms of content, geography, format and output medium. This includes the derivation of new variables, the creation of user-defined geographies, etc. Custom products can be produced from the 1971, 1976, 1981, 1986, 1991 and 1996 Census databases. It should be noted that confidentiality constraints are applied where necessary.

The *census dictionaries* are available to assist users in identifying the required variables and distributions. Documentation on historical comparability of concepts is also available in the *1996 Census Dictionary* for users interested in making comparisons across census years.

Statistics Canada consultants assist and advise users in developing specifications for the custom products which best satisfy their data requirements.

Geographic Level

Custom products are available for any geographic area(s) specified by the user. It should be noted that certain confidentiality constraints apply. The geographic level can be defined in terms of:

(a) Standard census geographic areas

Standard census geographic areas such as enumeration areas, census tracts, census subdivisions, census metropolitan areas and census agglomerations, or any combinations thereof. (For example, census tracts can be aggregated to form city planning districts, or census subdivisions can be aggregated to form market areas.) For 1996, postal code geography can also be used for the creation of custom products.

(b) Geocoded areas

Data can be retrieved for any area which can be marked on a map and geocoded. Geocoding is the process of creating electronic boundaries (digitizing) based on custom client areas as delineated on a map. Possible formats include circles around points or other simple polygons. Examples of applications of geocoding include city wards which are defined as polygons on a map, and marketing target areas defined as circles of a specified diameter around central points. See Geocoding Service further in this section.

Note:

Custom products can be prepared to the specifications of the user on a variety of output media, including:

- *computer printout;*
- *magnetic tape/cartridge;*
- *UNIX cartridge;*
- *diskette;*
- *CD-ROM.*

A variety of formats are available for compatibility with most mainframe and PC-based applications. Output designed for use in a PC environment can be packaged with Statistics Canada's DOS- or Windows-based viewing software. Further details on the Census Custom Products Service can be obtained through the Statistics Canada Regional Reference Centre nearest you.

Catalogue No.: 97C0001
Release: Fourth quarter of 1997
Price: See Note below.

Note: 1996 Pricing of Custom Products

Custom products are prepared on a full cost-recovery basis, including all consultation, computer processing and other costs incurred in developing and producing the tabulations. The minimum price per table is \$930.

Estimates of cost and delivery time will be provided to the client for approval before development begins. The following factors are considered in the pricing of custom products:

- consultation fees;
- data processing fees;
- defined variable(s) and/or variable manipulations;
- custom formatting;
- output medium;
- after-sales services.

The costs for most of these services are based on an hourly rate. Geocoding costs are recovered at a rate of \$350 (minimum fee) + an average of \$40/polygon.

The total price includes shipping and handling but excludes any applicable goods and services taxes. Prices are subject to change.

Further details on the Census Custom Products Service can be obtained through the Statistics Canada Regional Reference Centre nearest you.

➤ Semi-custom Products

In terms of flexibility, semi-custom profiles fall between the standard products and custom tabulations. The semi-custom product line enables users to replicate the content of published profile data for the geographic area(s) and output medium of their choice. Profiles provide an overview of the selected geographic area(s). Data are presented for various census characteristics. Included are numerous characteristics pertaining to individuals, families, households and dwellings. They are in a format which is compact and easy to use. Information such as counts, rates and averages provides indicators which can be easily compared across geographic areas. The profiles are valuable reference tools for users requiring quick summaries of numerous characteristics for selected areas. They are particularly suited for entry into systems for basic data analysis, including comparisons, graphing and mapping.

The semi-custom line consists of two product types: basic profiles and target group profiles.

(a) Basic profiles

The basic profiles combine characteristics from the basic data collected from 100% of the population, and the detailed socio-economic data collected from a 20% sample. Basic profiles can be produced from the 1971 through 1996 Census databases.

(b) Target group profiles

These profiles allow the users to select a particular target group (such as an ethnic group or a linguistic group) and to obtain characteristics for that group only. The data are based on the 20% sample and are tabulated at the population level only. Target group profiles can be produced from the 1991 and 1996 Census databases.

Geographic Level

Semi-custom products are available for any geographic area(s) specified by the user. It should be noted that certain confidentiality constraints apply. The geographic level can be defined in terms of:

(a) Standard census geographic areas

Standard census geographic areas such as enumeration areas, census tracts, census subdivisions, census metropolitan areas and census agglomerations, or any combinations thereof. (For example, census tracts can be aggregated to form city planning districts, or census subdivisions can be aggregated to form market areas.) For 1996, postal code geography can also be used for the creation of semi-custom products.

(b) Geocoded areas

Data can be retrieved for any area which can be marked on a map and geocoded. Geocoding is the process of creating electronic boundaries (digitizing) based on custom client areas as delineated on a map. Possible formats include circles around points or other simple polygons. Examples of applications of geocoding include city wards which are defined as polygons on a map, and marketing target areas defined as circles of a specified diameter around central points. See Geocoding Service further in this section.

Note:

Semi-custom profiles are provided on diskette packaged with Statistics Canada's DOS- or Windows-based software. Further details on semi-custom profiles can be obtained through the Statistics Canada Regional Reference Centre nearest you. Users are encouraged to order these products well in advance of the release dates, particularly if specialized geographic areas must be created.

Catalogue No.: 97C0002
Release: Third quarter of 1998
Price: See Note below.

Note: 1996 Pricing of Semi-custom Profiles

The prices of semi-custom profiles are established using the following pricing factors per product type:

Semi-custom Profile Pricing Grid (\$ per table)

Cost = basic price + area cost	- \$200 for 2A profiles (combined with 2B for 1996)
Basic price + :	- \$200 for 2B profiles
	- \$275 for 2B target group profiles
Each of 1 to 100 areas	- \$3** for 2A profiles (combined with 2B for 1996)
	- \$3** for 2B profiles
	- \$3** for 2B target group profiles
Each of 101 to 2,000 areas	- \$1** for 2A profiles (combined with 2B for 1996)
	- \$1** for 2B profiles
	- \$1** for 2B target group profiles
Each of 2,001 to 5,000 areas	- \$.50** for 2A profiles (combined with 2B for 1996)
	- \$.50** for 2B profiles
	- \$.50** for 2B target group profiles
More than 5,000 areas	- \$.25** for 2A profiles (combined with 2B for 1996)
	- \$.25** for 2B profiles
	- \$.25** for 2B target group profiles

** Per area

Other factors affecting price:

- (1) creation of custom geographic area files (\$100/hr);
- (2) geocoding (\$350 minimum + an average of \$40/polygon);
- (3) output medium.

The total price includes shipping and handling but excludes any applicable goods and services taxes (to be charged separately). Prices are subject to change.

Further details on the semi-custom profiles can be obtained through the Statistics Canada Regional Reference Centre nearest you.

Geography Services

➤ Geocoding Service

The Geocoding Service allows users to define their own geographic areas of study (user-defined areas or aggregations of standard census geographic areas) for census data tabulations. This custom geography is produced from an aggregation at the block-face level in large urban centres with Street Network File coverage, and at the enumeration area level in small urban centres and rural areas. The user is thereby able to purchase census data for these custom areas.

Geocoding based on 1996 geography will be available in the fourth quarter of 1997.

Catalogue No.: 97C0005

Release: December 3, 1997

Price: Geocoding is priced at a minimum of \$350 plus an average of \$40 per polygon. The user may purchase the final boundary file for an additional \$400. Estimates will be provided based on the complexity of the request.

➤ Geography Custom Services

If the standard geographic products do not satisfy a user's need, Geography Custom Services are available to produce non-standard geographic products by special request. Examples include alternative packaging of digital cartographic files, special data retrievals, manipulations or merges using any of the geography computer files (postal codes, attribute files, boundary files and street network files).

Catalogue No.: 97C0006

Price: The minimum cost for this service is \$100. Estimates will be provided based on the nature and complexity of the request.

➤ Geography Custom Mapping

Thematic maps and other custom maps may be produced as a special request.

Catalogue No.: 97C0007

Price: The minimum cost for this service is \$350. Estimates will be provided based on the complexity of the request.

1996 Census of Agriculture

Overview of 1996 Census of Agriculture Products and Services

The 1996 Census of Agriculture offers users a wide array of standard and custom products and services on paper and in electronic form. The data are available for various geographic levels, including Canada, provinces, census agricultural regions, census divisions and census consolidated subdivisions. Users can choose between data from 1996 Census of Agriculture products and services, from the agriculture-population linkage database, and from the historical databases.

Description

Historical Overview of Canadian Agriculture – This is an updated and expanded version of a very popular publication that made its debut in 1991. It provides basic counts, totals, percentage change figures and percentage distributions for a large number of variables at the national and provincial levels, for the 1976, 1981, 1986, 1991 and 1996 censuses of agriculture. Two new sections have been added for 1996: one contains 75 years of Census of Agriculture data (1921 to 1996) for selected variables; the other summarizes changes between 1991 and 1996 in the land management practices series, first collected in 1991.

Profile of Canadian Farm Operators – This new publication presents 1996 Census of Agriculture national and provincial data on the characteristics of farm operators (e.g., kind of work, operation of non-farm businesses and farm-related injuries) and selected agricultural variables (e.g., type of farm, gross farm income) cross-tabulated with the number of operators per farm and with the age and sex of farm operators. In addition, there are comparative tables showing the changes between the 1991 and 1996 censuses of agriculture.

Agricultural Profiles – This series of eight publications (one for Canada, one for the Atlantic provinces and one for each of the remaining six provinces) contains counts and summary totals for all 1996 farm variables at the Canada, provincial and subprovincial levels.

1996 Census of Agriculture CD-ROM – Data from the 1996 Census of Agriculture, along with selected data from the 1996 agriculture-population linkage database and the historical databases are available for the first time on CD-ROM. This product is released in two stages, depending on the availability of the data. The first release will contain all 1996 Census of Agriculture variables pertaining to farms and farm operators. The second release will include additional information from the agriculture-population linkage database and the historical databases.

Canadian Agriculture at a Glance – A new version of this very popular 1991 publication is being produced for the 1996 Census of Agriculture. The highly effective layout used in 1991 consisted of a series of short analytical articles, with data presented in maps and charts. New for 1996 are articles providing farm-related data from other sources, such as food transportation, consumption and processing, to round out the picture of the Canadian agri-food industry.

Custom products and services – Census of Agriculture User Services can tailor products to the specific requirements of data users. With custom tabulations, users can generate made-to-measure tables from Census of Agriculture data, the agriculture-population linkage database and the historical databases. Custom tabulations are available for census years from 1966 through 1996 (agriculture-population linkage databases were not generated in 1966 and 1976). User Services can also produce thematic maps in colour or black and white to suit customers' specifications.

Subject to confidentiality restrictions, custom tabulations and maps can be produced for either standard or user-defined areas.

Semi-custom data products – Semi-custom products can be developed from standard tabulations for customers who are only interested in selected variables or standard geographic areas.

Media

Except for the *1996 Census of Agriculture CD-ROM*, products are available in print form (publications). Custom and semi-custom products can be delivered in various media – paper, diskette or CD-ROM – to suit the user's needs. Products supplied on diskette or CD-ROM can be packaged with retrieval software.

Prices

The 1996 *Census of Agriculture CD-ROM* costs \$2,500.

The Agricultural Profiles series are priced at \$39 each, and all other publications are \$49 apiece. The prices of custom products and services vary depending on consultation time, the number of geographic areas involved, data processing requirements and the media in which the product is delivered. Semi-custom data products start at \$50

1. Data Products

Data publications present 1996 Census of Agriculture results in convenient and comprehensible formats. Using concise tables and straightforward graphics, the series presents data for farm variables and farm operator characteristics in 10 separate publications. Selected data are presented in cross-classified, small area and historical comparison tables. Geographic levels range from Canada to census consolidated subdivision levels.

➤ Historical Overview of Canadian Agriculture

This publication is an updated and expanded version of the very popular historical publication introduced in 1991. It presents basic counts, totals, percentage changes and percentage distributions for an expanded set of variables at the Canada and province levels for the 1976, 1981, 1986, 1991 and 1996 Censuses of Agriculture. Two new sections have been added for 1996: the first presents 75 years of Census of Agriculture data (1921 to 1996) for selected variables and the second highlights the change between 1991 and 1996 in the series of land management practices variables introduced in 1991.

Catalogue No.:	93-358-XPB	ISBN:	0-660-59287-8
Release:	August 1997		
Media:	Print		
Price:	Canada: \$49	Other countries:	US\$49

➤ Profile of Canadian Farm Operators

This new publication presents Canada and province level data on farm operator characteristics from the 1996 Census of Agriculture questionnaire (e.g., types of work done, operation of non-agricultural businesses, farm-related injuries) and selected agricultural variables (e.g., farm type, gross farm receipts) cross-classified by the number of operators per farm, as well as the age and sex of farm operators. Historical comparison tables displaying the changes that occurred between the 1991 and 1996 Censuses of Agriculture are also included.

Release:	Fourth quarter of 1997		
Media:	Print		
Price:	Canada: \$39	Other countries:	US\$39

➤ Agricultural Profile of Canada

This publication presents a group of area profile tables which provide basic counts and totals for all 1996 Census of Agriculture farm variables at the Canada and province levels, and two additional tables which present selected variables cross-classified by gross farm receipts and farm type at the Canada level. Also included are selected data for the Yukon and Northwest Territories. The 1996 Census of Agriculture questionnaire is also included for users' reference.

Catalogue No.:	93-356-XPB	ISBN:	0-660-59273-8
Release:	August 7, 1997		
Media:	Print		
Price:	Canada: \$39	Other countries:	US\$39

➤ **Agricultural Profile of the Atlantic Provinces**

The Atlantic provinces publication includes the area profile tables for all four Atlantic provinces on a provincial and subprovincial level. The area profile tables present all 1996 farm variables at the province, census agricultural region and census division levels. Three additional tables are included: a small area data table with selected variables tabulated at the census division and census consolidated subdivision levels, and two cross-classified tables at the province level. The 1996 Census of Agriculture questionnaire is also included for users' reference. Finally, this publication contains reference maps which identify the location of all geographic areas tabulated for the Atlantic provinces.

Catalogue No.:	95-175-XPB	ISBN:	0-660-59274-6
Release:	August 7, 1997		
Media:	Print		
Price:	Canada: \$39	Other countries:	US\$39

➤ **Agricultural Profile of Quebec**

This publication presents area profile tables for all 1996 farm variables at the province, census agricultural region and census division levels. Three additional tables are included: a small area data table with selected variables tabulated at the census division and census consolidated subdivision levels, and two cross-classified tables at the province level. The 1996 Census of Agriculture questionnaire is also included for users' reference. Finally, this publication contains reference maps which identify the location of all geographic areas tabulated for Quebec.

Release:	August 7, 1997		
Media:	Print		
Price:	Canada: \$39	Other countries:	US\$39

➤ **Agricultural Profile of Ontario**

This publication presents area profile tables for all 1996 farm variables at the province, census agricultural region and census division levels. Three additional tables are included: a small area data table with selected variables tabulated at the census division and census consolidated subdivision levels, and two cross-classified tables at the province level. The 1996 Census of Agriculture questionnaire is also included for users' reference. Finally, this publication contains reference maps which identify the location of all geographic areas tabulated for Ontario.

Release:	August 7, 1997		
Media:	Print		
Price:	Canada: \$39	Other countries:	US\$39

➤ **Agricultural Profile of Saskatchewan**

This publication presents area profile tables for all 1996 farm variables at the province, census agricultural region and census division levels. Three additional tables are included: a small area data table with selected variables tabulated at the census division and census consolidated subdivision levels, and two cross-classified tables at the province level. The 1996 Census of Agriculture questionnaire is also included for users' reference. Finally, this publication contains reference maps which identify the location of all geographic areas tabulated for Saskatchewan.

Catalogue No.:	95-179-XPB	ISBN:	0-660-59278-9
Release:	August 7, 1997		
Media:	Print		
Price:	Canada: \$39	Other countries:	US\$39

➤ **Agricultural Profile of Alberta**

This publication presents area profile tables for all 1996 farm variables at the province, census agricultural region and census division levels. Three additional tables are included: a small area data table with selected variables tabulated at the census division and census consolidated subdivision levels, and two cross-classified tables at the province level. The 1996 Census of Agriculture questionnaire is also included for users' reference. Finally, this publication contains reference maps which identify the location of all geographic areas tabulated for Alberta.

Catalogue No.:	95-180-XPB	ISBN:	0-660-59279-7
Release:	August 7, 1997		
Media:	Print		
Price:	Canada: \$39	Other countries:	US\$39

➤ **Agricultural Profile of British Columbia**

This publication presents area profile tables for all 1996 farm variables at the province, census agricultural region and census division levels. Three additional tables are included: a small area data table with selected variables tabulated at the census division and census consolidated subdivision levels, and two cross-classified tables at the province level. The 1996 Census of Agriculture questionnaire is also included for users' reference. Finally, this publication contains reference maps which identify the location of all geographic areas tabulated for British Columbia.

Catalogue No.:	95-181-XPB	ISBN:	0-660-59280-0
Release:	August 7, 1997		
Media:	Print		
Price:	Canada: \$39	Other countries:	US\$39

➤ **1996 Census of Agriculture CD-ROM**

Data from the 1996 Census of Agriculture, selected data from the 1996 Agriculture-Population Linkage database and historical databases will be available for the first time on CD-ROM. This product will be released in two phases to accommodate the availability of data. The first release will contain all farm and farm operator variables from the 1996 Census of Agriculture. The second release will contain additional selected data from the 1996 Agriculture-Population Linkage database and historical databases.

Catalogue No.:	93F0031XCB	ISBN:	0-660-59285-1
Release:	Fourth quarter of 1997		
Media:	CD-ROM		
Price:	Canada: \$2,500	Other countries:	US\$2,500
	With the purchase of the first CD-ROM, you will receive the second CD-ROM at no additional cost.		

2. Analytical Product

➤ **Canadian Agriculture at a Glance**

A repeat of the very successful 1991 publication will be produced for the 1996 Census of Agriculture. Building on the effective presentation format introduced in 1991, it will include a series of short analytical articles employing maps and graphics to present the data. New for 1996 will be the inclusion of articles presenting agriculture-related data from other sources such as transportation, food consumption and food processing to provide a more complete picture of Canada's agri-food industry.

Catalogue No.:	96-325-XPB	ISBN:	0-660-59291-6
Release:	Second quarter of 1999		
Media:	Print		
Price:	Canada: \$49	Other countries:	US\$49

3. Census of Agriculture Services

Custom Data Products and Services

The User Services Unit of the Census of Agriculture can tailor products to meet users' special data requirements. Custom tabulations allow the users to create personalized tables from the 1996 Agriculture and Agriculture-Population Linkage databases as well as the historical databases. Custom tabulations are available for the census years 1966 to 1996. (Agriculture-Population Linkage databases were not created for 1966 and 1976.) The 1996 Census of Agriculture data have been available since May 14, 1997, while data from the Agriculture-Population Linkage database will be available in the fourth quarter of 1998.

The User Services Unit can also produce thematic maps to meet the clients' specifications. These maps are available in black and white or in colour.

Subject to confidentiality constraints, custom tabulations and maps can be produced for Census of Agriculture standard geographic areas as well as for user-defined areas.

Catalogue No.: 97C0003

Release: May 31, 1997

Price: Pricing is based on consulting time, number of geographic areas requested, data processing requirements and media required to deliver the custom product.

Semi-custom Data Products

Semi-custom products are created from the standard tabulations for clients who are only interested in specific variables or certain standard geographic areas.

Catalogue No.: 97C0004

Release: June 30, 1997

Price: Provincial/regional prices:
 Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick: \$150
 Atlantic provinces: \$400
 Quebec, Ontario and Saskatchewan: \$750
 Manitoba, Alberta and British Columbia: \$250
 Prairie provinces: \$1,000

How to Get Help

1. Regional Reference Centres

Statistics Canada regional reference centres are located across the country. Each centre has a complete collection of current publications and reference documents that can be consulted or purchased, along with microcomputer diskettes, CD-ROMs, maps and other products and services, including CANSIM.

The staff of regional reference centres provide consultation and research services as well as after-sales service and support. They also offer seminars and workshops on how to use Statistics Canada information, including census data.

For more information about the services provided by regional reference centres, you can call or visit the closest centre. The locations are listed below. If you are outside the local calling area, please dial the toll-free number.

2. Community Access

Residents of the National Capital Region can use Statistics Canada's library, located at head office in Ottawa. The library maintains complete current and historical records of all Statistics Canada products. Library staff are available to help users find the information they need.

Census information can also be found in libraries across the country. Some libraries receive free copies of the entire line of Statistics Canada products on various output media. Provincial and territorial statistics offices also hold census data. In addition, products can be purchased at bookstores that stock Canadian government publications. Canadian Universities – Data Liberation Initiative (DLI)

This pilot project provides Canadian universities with affordable access to Statistics Canada's files and databases for teaching and research purposes. Universities participating pay an annual subscription fee and supply support services such as personnel, equipment and software. Statistics Canada provides data files, technical assistance and storage via file transfer protocol (FTP) over the Internet. The DLI gives universities access to public use microdata files, large databases such as census profiles and CANSIM, and geography data such as boundary files. Statistics Canada provides copies of all products distributed

exclusively on CD-ROM. With the DLI, universities no longer have to form consortiums (consortiums were an innovative, efficient way for a number of institutions to share the cost of expensive data). Under the DLI, as under the consortium arrangements, access to the files is restricted by contract to the student population, teaching staff and other employees of participating universities. To find out more about the DLI, send an e-mail to: http://berigan@statcan.ca.

Internet

Statistics Canada's Talon service – named after Canada's first official statistician, Jean Talon – was set up in February 1994. Talon can be found at: <http://www.statcan.ca>.

At all times during the census dissemination cycle, this web site offers users a selection of material from the various reference products, a complete issue of *The Daily*, available on the date of release for each variable, containing highlights and selected analysis, and three or four supporting tables for each variable. Also, users have access to detailed information on census products and services through IPS (Information on Products and Services system). IPS is a one-stop searchable repository of all Statistics Canada publications, products and services. With IPS, users can perform organized and efficient searches to find out what publications or electronic products, microdata files, or services are available in their area of interest.

Appendices

Overview of Geography Products and Services

Appendix A provides an overview of all the geographic information available within the full line of 1996 Census products and services.

1996 Census Dictionary - This product provides definitions of all the concepts, variables and geographic elements of the 1996 Census. The information provided for each variable includes the associated question number(s), the response categories or classifications, and remarks about points of interest, such as the variable's history. The dictionary also contains a guide to census geography and applications, a general index and easy-to-read charts (for more details, see Section 1.1).

GeoRef - *GeoRef* is regarded as both a reference product and a standard data product. It is a powerful data retrieval and tabular output tool with software and data on a CD-ROM. Users can explore the links between standard geographic levels and determine geographic codes, names, and population and dwelling counts. *GeoRef* also provides EA correspondence data (for 1996 Census EAs and 1991 Census EAs) and an EA reference map listing that facilitates identification of appropriate EA reference maps (for more details, see Section 1.2).

Reference Maps - These products show the geography of the census and help users find the boundaries of census areas so that they can relate census data to physical locations. Over 7,500 reference maps are produced, covering various geographic levels, including enumeration areas (the unit used for census collection), federal electoral districts (MPs' ridings), census tracts (neighbourhoods), census agglomerations and census metropolitan areas (large urban centres), census subdivisions (municipalities) and census divisions (counties and "municipalités régionales de comté"). Reference maps are sold individually or in sets (for more details, see Section 1.2).

Population and Dwelling Counts - A National Overview

- This publication consists of 20 tables providing population and dwelling counts from the 1996 Census of Canada. The geographic areas covered are provinces and territories, federal electoral districts (1987 Representation Order), census divisions, census subdivisions, designated places, census metropolitan areas and census agglomerations, primary census metropolitan areas and primary census agglomerations, and urban and rural areas. The geographic boundaries of these areas are those which were in force on January 1, 1996 (geographic reference date for the 1996 Census). The publication also includes

population and dwelling counts for forward sortation areas (first three characters of the postal code) as reported by census respondents on Census Day (May 14, 1996). Forward sortation areas and designated places are included for the first time.

The tables in this publication can also be obtained individually on diskette. Two tables that do not appear in the publication are also available:

Population and Dwelling Counts, for Census Tracts, 1996 Census - 100% Data - This table shows the 1996 population and dwelling counts for census tracts by census metropolitan area and census agglomeration.

Population and Dwelling Counts, for Enumeration Areas, 1996 Census - 100% Data - This table shows the 1996 population and dwelling counts for enumeration areas by federal electoral district (1987 Representation Order).

Postal Code Counts - 1996 Census - This is a new product for 1996. It contains population and dwelling counts for all six-character postal codes reported by respondents. The population and dwelling counts are presented by individual postal code and forward sortation area (FSA - first three characters of the six-character postal code). The data come with Windows™-based software that enables users to perform simple data manipulations such as searching the data set for specific postal codes, importing groups of postal codes for which counts are required, and exporting groups of postal codes. Documentation and reference material are provided in electronic form on the CD-ROM (for more details, see Section 3.1).

Technical Report - Postal Codes in the 1996 Census - Technical reports take a close look at the quality of the data produced by the vast, complex undertaking that was the 1996 Census. Despite the considerable effort taken to ensure high quality at every stage, the census results are likely to contain some degree of error. The reports focus on collection and processing operations and provide the results of data quality evaluation and notes on comparability with previous censuses.

The technical reports are intended for experienced users, but they are written so that any census data user may find them helpful. In all, there are 19 technical reports covering a number of subjects and variables, including *Postal Codes in the 1996 Census* (for more details, see Section 1.1).

Digital Geography Products - Attribute Information

Block-face Data File (BFDF) – This file contains 1996 population and dwelling counts for the block-faces of urban centres covered by the street network files. A block-face is generally one side of a city street between two consecutive intersections; it is also the smallest geographic unit available from Statistics Canada. The BFDF also links the block-face to all other levels of standard geography (enumeration areas and above) through geographic codes. The file contains street names with address ranges as well as coordinates for a point representing the approximate centre of each block-face. A reference guide is included.

Postal Code Conversion File (PCCF) – This file provides the relationship between Canada Post Corporation's six-character postal codes and the standard 1996 Census geographic areas (enumeration areas, municipalities, census tracts and so on). It also provides the x, y coordinates of a point representing the approximate location of the postal code to support mapping. A reference guide is included.

Postal Codes by Federal Ridings File (PCFRF) (1996 Representation Order) – This ASCII file provides a link between six-character postal codes and federal electoral districts. A federal electoral district is any place or territory entitled to elect a Member of Parliament (MP) to sit in the House of Commons.

For more information on these products, see Section 2.1.

Digital Geography Products - Spatial Information

Digital boundary files (DBFs) and digital cartographic files (DCFs) – Digital boundary files show the official boundaries used for census collection. As a result, the boundaries often appear as straight lines extending into bodies of water. In digital cartographic files, the boundaries have been altered to follow the coastlines and shorelines of Canada's land mass, including major islands.

Street network files (SNFs) – These are digital files representing the street networks of most large urban centres in Canada. They also contain other visible physical and cultural features (such as hydrography, railroads and pipelines) and attribute information (e.g., street names, hydrographic names and address ranges for streets with assigned addresses). Streets and addresses are updated to reflect the information collected on Census Day, May 14, 1996. In combination with appropriate software owned by the user, street network files are useful in preparing routes, planning delivery services and mapping. A reference guide is included.

Skeletal street network files (SSNFs) – These are "thinned out" street network files consisting of cartographic reference features such as major streets (with street names but no address ranges) and some railway features used to define census tract boundaries.

For more information on these products, see Section 2.2.

Geography Services

Geocoding Service – With this service, users can define their own geographic areas (user-defined areas or aggregates of standard census geography areas) for tabulations of census data (for more details, see Chapter 5).

Geography Custom Services – If standard geography products do not meet a user's needs, Geography Custom Services can prepare non-standard geography products by special request (for more details, see Chapter 5).

Geography Custom Mapping – Thematic and other custom maps can be produced by special request (for more details, see Chapter 5).

Data Quality, Sampling and Weighting, Confidentiality and Random Rounding

Data Quality

General

The 1996 Census was a large and complex undertaking and, while considerable effort was taken to ensure high standards throughout all collection and processing operations, the resulting estimates are inevitably subject to a certain degree of error. Users of census data should be aware such error exists, and have some appreciation of its main components, so that they can assess the usefulness of census data for their purposes and the risks involved in basing conclusions or decisions on these data.

Errors can arise at virtually every stage of the census process, from the preparation of materials through the listing of dwellings, data collection and processing. Some errors occur more or less at random, and when the individual responses are aggregated for a sufficiently large group, such errors tend to cancel out. For errors of this nature, the larger the group, the more accurate the corresponding estimate. It is for this reason that users are advised to be cautious when using small estimates. There are some errors, however, which might occur more systematically, and which result in "biased" estimates. Because the bias from such errors is persistent no matter how large the group for which responses are aggregated, and because bias is particularly difficult to measure, systematic errors are a more serious problem for most data users than the random errors referred to previously.

For census data in general, the principal types of error are as follows:

- **coverage errors**, which occur when dwellings and/or individuals are missed, incorrectly included or double counted;
- **non-response errors**, which result when responses cannot be obtained from a small number of households and/or individuals, because of extended absence or some other reason;
- **response errors**, which occur when the respondent, or sometimes the Census Representative, misunderstands a census question, and records an incorrect response;

- **processing errors**, which can occur at various steps including **coding**, when "write-in" responses are transformed into numerical codes; **data capture**, when responses are transferred from the census questionnaire to computer tapes by key-entry operators; and **imputation**, when a "valid", but not necessarily correct, response is inserted into a record by the computer to replace missing or "invalid" data ("valid" and "invalid" referring to whether or not the response is consistent with other information on the record);

- **sampling errors**, which apply only to the supplementary questions on the "long form" asked of a one-fifth sample of households, and which arise from the fact that the results for these questions, when weighted up to represent the whole population, inevitably differ somewhat from the results which would have been obtained if these questions had been asked of all households.

The above types of error each have both random and systematic components. Usually, however, the systematic component of sampling error is very small in relation to its random component. For the other non-sampling errors, both random and systematic components may be significant.

Coverage Errors

Coverage errors affect the accuracy of the census counts, that is the sizes of the various census universes: population, families, households and dwellings. While steps have been taken to correct certain identifiable errors, the final counts are still subject to some degree of error resulting from persons or dwellings being missed, incorrectly included in the census or double counted.

Missed dwellings or persons result in **undercoverage**. Dwellings can be missed because of the misunderstanding of enumeration area (EA) boundaries, or because they are not apparent (e.g. unmarked dwellings) or appear uninhabitable. Persons can be missed when their dwelling is missed or is classified as vacant, or when individual household members are omitted from the questionnaire because the respondent misinterprets the instructions on whom to include. Some individuals may be missed because they have no usual residence and did not spend census night in any dwelling.

Dwellings or persons that are incorrectly included or double counted result in **overcoverage**. Overcoverage of dwellings can occur when structures unfit for habitation are listed as dwellings, or when units which do not meet the census definition of a dwelling are listed separately instead of being treated as part of a larger dwelling. Double counting of dwellings also can occur because of ambiguity over EA boundaries. Persons can be double counted because their dwelling is double counted or because the guidelines on whom to include on the questionnaire have been misunderstood. Occasionally, someone who is not in the census population universe, such as a foreign resident or a fictitious person, may, incorrectly, be enumerated in the census. On average, overcoverage is less likely to occur than undercoverage and, as a result, counts of dwellings and persons are likely to be slightly underestimated.

In 1996, three studies are used to measure coverage error. In the Vacancy Check, a sample of dwellings listed as vacant was revisited to verify that they were vacant on Census Day. Adjustments have been made to the final census counts for households and persons missed because their dwelling was incorrectly classified as vacant. Despite these adjustments, the final counts are still subject to some undercoverage. Undercoverage tends to be higher for certain segments of the population such as young male adults and recent immigrants. The Reverse Record Check study is used to measure the residual undercoverage for Canada, and each province and territory. The Overcoverage Study is designed to investigate overcoverage errors. The results of the Reverse Record Check and the Overcoverage Study, when taken together, furnish an estimate of net undercoverage.

Other Non-sampling Errors

While coverage errors affect the number of units in the various census universes, other errors affect the characteristics of those units.

Sometimes, it is not possible to obtain a complete response from a household, even though the dwelling was identified as occupied and a questionnaire dropped off. The household members may have been away throughout the census period or, in rare instances, the householder may have refused to complete the form. More frequently, the questionnaire is returned but information is missing for some questions or individuals. Considerable effort is devoted to ensure as complete a response as possible. Census representatives edit the questionnaires and follow up on missing information. Their work is then checked by both a supervisor and a quality control technician. Despite this, at the end of the collection stage, a small number of responses is still

missing. Although missing entries are eliminated during processing by replacing a missing value by the corresponding entry for a "similar" record, there remain some potential **non-response errors**. This is particularly serious if the non-respondents differ in some respects from the respondents, since this procedure will result in **non-response bias**.

Even when a response is obtained, it may not be entirely accurate. The respondent may have misinterpreted the question or may have guessed the answer, especially when answering on behalf of another, possibly absent, household member. Such errors are referred to as **response errors**. While response errors usually arise from inaccurate information provided by respondents, they can also result from mistakes by the Census Representative when completing certain parts of the questionnaire, such as structural type of dwelling, or when calling back to obtain a missing response.

Some of the questions on the census document require a written response. During processing, these "write-in" entries are given a numeric code. **Coding errors** can occur when the written response is ambiguous, incomplete, difficult to read or when the code list is extensive (e.g., Major Field of Study, Place of Work). A formal Quality Control (QC) operation is used to detect, rectify and reduce coding errors. Within each work unit, a sample of responses is independently coded a second time. The resolution of discrepancies between the first and second codings determines whether recoding of the work unit is necessary. Except for the Industry and Occupation variables, much of the census coding is now automated, partly in an effort to reduce the extent of coding errors.

The information on the questionnaires is key-entered onto a computer file. Two procedures are used to control the number of **data capture errors**. First, certain edits (such as range checks) are performed as the data are keyed. Second, a sample from each batch of documents is rekeyed and compared with the original entries. Unsatisfactory work is identified and corrected and the remainder of the batch is rekeyed as needed.

Once captured, the data are edited where they undergo a series of computer checks to identify missing or inconsistent responses. These are replaced during the imputation stage of processing where either a response consistent with the other respondent's data is inferred or a response from a similar donor is substituted. Imputation ensures a complete database where the data correspond to the census counts and facilitate multivariate analyses. Although imputation may introduce errors, the methods used have been rigorously tested to minimize systematic imputation errors.

Various studies are being carried out to evaluate the quality of the responses obtained in the 1996 Census. For each question, response rates and edit failure rates have been calculated. These can be useful in identifying the potential for non-response errors and other type of errors. Also, tabulations from the 1996 Census have been or will be compared with corresponding estimates from previous censuses, from sample surveys (such as the Labour Force Survey) and from various administrative records (such as birth registrations and municipal assessment records). Such comparisons can indicate potential quality problems or at least discrepancies between the sources.

In addition to these aggregate-level comparisons, there are some micro-match studies in progress, in which census responses are compared with another source of information at the individual record level. For certain "stable" characteristics (such as Age, Sex, Mother Tongue, Place of Birth), the responses obtained in the 1996 Census, for a sample of individuals, are being compared with those for the same individuals in the 1991 Census.

Sampling Errors

Estimates obtained by weighting up responses collected on a sample basis are subject to error due to the fact that the distribution of characteristics within the sample will not usually be identical to the distribution of characteristics within the population from which the sample has been selected.

The potential error introduced by sampling will vary according to the relative scarcity of the characteristics in the population. For large cell values, the potential error due to sampling, as a proportion of the cell value, will be relatively small. For small cell values, this potential error, as a proportion of the cell value, will be relatively large.

The potential error due to sampling is usually expressed in terms of the so-called "standard error". This is the square root of the average, taken over all possible samples of the same size and design, of the squared deviation of the sample estimate from the value for the total population.

The following table provides approximate measures of the standard error due to sampling. These measures are intended as a general guide only.

Table: Approximate Standard Error Due to Sampling for 1996 Census Sample Data

Cell Value	Approximate Standard Error
50 or less	15
100	20
200	30
500	45
1,000	65
2,000	90
5,000	140
10,000	200
20,000	280
50,000	450
100,000	630
500,000	1,400

Users wishing to determine the approximate error due to sampling for any given cell of data, based upon the 20% sample, should choose the standard error value corresponding to the cell value that is closest to the value of the given cell in the census tabulation. When using the obtained standard error value, in general the user can be reasonably certain that, for the enumerated population, the true value (discounting all forms of error other than sampling) lies within plus or minus three times the standard error (e.g., for a cell value of 1,000, the range would be 1,000 \pm (3 \times 65) or 1,000 \pm 195).

The standard errors given in the table above will not apply to population or universe (persons, households, dwellings or families) totals or subtotals for the geographic area under consideration (see Sampling and Weighting). The effect of sampling for these cells can be determined by comparison with a corresponding 100% data publication.

The effect of the particular sample design and weighting procedure used in the 1996 Census will vary, however, from one characteristic to another and from one geographic area to another. The standard error values in the table may, therefore, understate or overstate the error due to sampling.

Sampling and Weighting

The 1996 Census data were collected either from 100% of the population or on a sample basis (i.e. from a random sample of one in five households) with the data weighted up to provide estimates for the entire population. The information in this report was collected on a 20% sample basis and weighted up to compensate for sampling. All table headings are noted accordingly. Note that, on Indian reserves and in remote areas, all data were collected on a 100% basis.

For any given geographic area, the weighted population, household, dwelling or family total or subtotal may differ from that shown in reports containing data collected on a 100% basis. Such variation (in addition to the effect of random rounding) will be due to sampling.

Confidentiality and Random Rounding

The figures shown in the tables have been subjected to a confidentiality procedure known as "**random rounding**" to prevent the possibility of associating statistical data with any identifiable individual. Under this method, all figures, including totals and margins, are randomly rounded either up or down to a multiple of "5", and in some cases "10". While providing strong protection against disclosure, this technique does not add significant error to the census data. The user should be aware that totals and margins are rounded independently of the cell data so that some difference between these and the sum of rounded cell data may exist. Also, minor differences can be expected in corresponding totals and cell values among various census tabulations. Similarly, percentages, which are calculated on rounded figures, do not necessarily add up to 100%. Percentage distributions and rates for the most part are based on rounded data, while percentage changes and averages are based on unrounded data. It should also be noted that small cell counts may suffer a significant distortion as a result of random rounding. Individual data cells containing small numbers may lose their precision as a result.

Users should be aware of possible data distortions when they are aggregating these rounded data. Imprecisions as a result of rounding tend to cancel each other out when data cells are re-aggregated. However, users can minimize these distortions by using, whenever possible, the appropriate subtotals when aggregating.

For those requiring maximum precision, the option exists to use custom tabulations. With custom products, aggregation is done using individual census database records. Random rounding occurs only after the data cells have been aggregated, thus minimizing any distortion.

In addition to random rounding, **area suppression** has been adopted to further protect the confidentiality of individual responses.

Area suppression is the deletion of all characteristic data for geographic areas with populations below a specified size. The extent to which data are suppressed depends upon the following factors:

- If the data are tabulated from the 100% database, the data are suppressed if the total area population in the area is less than 40.
- If the data are tabulated from the 20% sample database, the data are suppressed if the total non-institutional population in the area from either the 100% or 20% databases is less than 40.

There are some exceptions to these rules:

- Income distributions and related statistics are suppressed if the non-institutional population in the area from either the 100% or 20% databases is less than 250.
- If the data are tabulated from the 100% database and refer to six-digit postal codes, the data are suppressed if the total population in the area is less than 100.
- If the data are tabulated from the 20% sample database and refer to six-digit postal codes, the data are suppressed if the total non-institutional population in the area from either the 100% or 20% databases is less than 100.

In all cases, suppressed data are included in the appropriate higher aggregate subtotals and totals.

The suppression technique is being implemented for all products involving subprovincial data (i.e. Profile series, basic summary tabulations, semi-custom and custom data products) collected on a 100% or 20% sample basis.

With **cell suppression**, the minimum acceptable value for a cell is specified. All cell values below the designated cut-off are deleted and replaced by zeros. However, the suppressed data are included in the appropriate higher aggregate subtotals and totals.

For further information on the quality of census data, contact the Social Survey Methods Division at Statistics Canada, Ottawa, Ontario, Canada K1A 0T6, or by dialing (613) 951-6934.
